Our Research Areas

The Faculty of Business, Economics and Statistics has developed five interdisciplinary research areas that overcome the limitations of disciplines and bring together ideas and projects from different fields.

CMI Changing Markets and Institutions

Transaction costs – costs caused by the exchange of goods and services in economic systems – are as important as costs caused by the production of those same goods and services. Efficient coordination of transactions in markets and companies through institutional design constantly offers new challenges for countries as well as for companies within an unwavering, further intensifying, global competition. The digitalisation of economic processes does not only change the scale (big data) but also the matter of economic transactions. Economic analyses and applications deal with the effectiveness of market imperfections and its control by governance structures and contractual incentive systems.

CSP Corporate Strategies and Processes

Modern companies put an end to the traditional separation of strategy development by market and environment analysis and organisation development regarding the design of internal processes. This is replaced by a strategic management that, as a process, coordinates corporate structures and value-adding processes and takes into account the rapidly changing environmental conditions and internationality. Besides strategic management in particular, this research area also addresses technology and innovations management, supply chain and operations management as well as – caused by the advancement of digitalisation and the availability of big data – business analytics. Evidently, all other business disciplines as well as some economic disciplines (such as industrial organisation or labour economics) and interdisciplinary approaches (such as cooperative economics or sharing economy) are included in this research area as well.

DSA Data Science and Analytics

In times of the availability of big data of nearly all societal domains and an ever increasing complexity of this data (high dimensional data), the development of suitable statistical methods, algorithms and appropriate optimisation methods is more urgent and important than ever. The demand for academically trained experts in data science and analytics on national and international labour markets is high. This results in challenges for the application field as well as for the latest methodological developments in statistics (analysis of high dimensional and heterogenic data, modelling, model selection and inference), operations research (optimisation and modelling) and quantitative and computer-assisted economics (business analytics, finance and applied econometrics). Applications are especially important for analysing currency, securities and energy markets, banks, insurances and their financial institutions, corporate finance of companies, as well as for logistics and operations management.

HBE Human Behavior and the Economy

Human behaviour in economic decision-making is at the core of this research area. To be able to make predictions using business and economic models, it is necessary to make assumptions about human behaviour. In experimental economics, these assumptions and models are put to the test. This interplay between theoretical and experimental approaches allows for a more realistic model regarding human decision-making. The results of research conducted on this topic today provide the foundation for its application in nearly all disciplines at our faculty, ranging from the analysis of economic and regulation policies and behavioural finance to solving business issues, e.g. in marketing, strategy, organisation, personnel and economic sociology.

MR Management of Resources

Resources – natural, human, financial and informational – are the foundation of economic activity. Their availability or shortage determines growth and development. Asymmetries in their distribution and privatisation caused by economic parties trigger strategic behaviour. Management of resources aims at the efficient use of resources in economic systems, on a societal as well as corporate level. Economic analyses and contributions focus on the growth and development of regions, sustainable environmental and energy policies and management, production and logistics within value-added chains, the design of educational and training systems as well as efficient information systems and their management.

Our Experts

On the following pages, we introduce our experts who conduct top-level research and teaching and build a centre of knowledge and expertise in the faculty's research areas. We group our experts into tenured academic staff (professors and associate professors), emeritus/retired colleagues who still conduct research and/or teaching at our faculty and non-tenured academic staff (assistant professors, postdoctoral researchers, predoctoral researcher, other).

We list our experts in the category they were associated with as of 31 December 2023. Researchers who left our faculty during the year 2023 are listed in the category they were last associated with.

Tenured Academic Staff

The following pages provide an overview of our academic staff who has a permanent contract. The list is organised in alphabetical order by last name. You can see the academic rank, i.e. (full) professor (Professor) or associate professor (Assoc. Prof.) as well as the department that the person is assigned to.

Ania Martinez, Ana Begona | Assoc. Professor
Department of Economics

Auer-Zotlöterer, Katharina | Assoc. Professor
Department of Marketing and International Business

Borrmann, Jörg | Assoc. Professor
Department of Finance

Cuchiero, Christa | Professor
Department of Statistics and Operations Research

Cunat, Alejandro | Professor
Department of Economics

Dörner, Karl Franz (Dean) | Professor
Department of Business Decisions and Analytics

Ehmke, Jan Fabian (Vice Dean Third Mission) | Professor
Faculty of Business, Economics and Statistics

Fabel, Oliver | Professor
Department of Business Decisions and Analytics

Fuchs, Christoph | Professor
Department of Marketing and International Business

Garcia, Daniel (with Tenure) | Assoc. Professor
Department of Economics

Gaunersdorfer, Andrea | Assoc. Prof.
Department of Finance

Gehrig-Merz, Monika | Professor
Department of Economics

Gehrig, Thomas | Professor
Department of Finance

Hartl, Richard | Professor
Department of Business Decisions and Analytics

Hautsch, Nikolaus (on leave) | Professor
Department of Statistics and Operations Research

Hohenwarter-Mayr, Daniela | Professor
Department of Business Law

Janssen, Maarten | Professor
Department of Economics

Jirak, Johannes Moritz | Professor
Department of Statistics and Operations Research

Keber, Christian | Assoc. Prof.
Department of Finance

Keck, Steffen (with Tenure) | Assoc. Professor
Department of Statistics and Operations Research

Kittel, Bernhard | Professor
Department of Economic Sociology

Klein, Irene | Assoc. Prof.
Department of Statistics and Operations Research

Kocher, Martin (on leave) | Professor
Department of Economics

Krivobokova, Tatyana (Vice Dean Research) | Professor
Department of Statistics and Operations Research

Leeb, Hannes | Professor
Department of Statistics and Operations Research

Lóránth, Gyöngyi | Professor
Department of Finance

Müller, Wieland | Professor
Department of Economics

Novák, Andreas | Assoc. Prof.
Department of Business Decisions and Analytics

Pfeiffer, Thomas | Professor
Department of Accounting, Innovation and Strategy

Pichler, Paul (with Tenure) | Assoc. Prof.
Department of Economics

Plakoyiannaki, Emmanuella | Professor
Department of Marketing and International Business

Pötscher, Benedikt | Professor
Department of Statistics and Operations Research

Rauner, Marion | Assoc. Prof.
Department of Business Decisions and Analytics

Reisinger, Heribert | Assoc. Prof.
Department of Marketing and International Business

Reitzig, Markus Georg | Professor
Department of Accounting, Innovation and Strategy

Schachinger, Werner | Assoc. Prof.
Department of Statistics and Operations Research

Schaffhauser-Linzatti, Michaela | Assoc. Professor
Department of Accounting, Innovation and Strategy

Schlag, Karl | Professor
Department of Economics

Schmidt-Dengler, Philipp | Professor
Department of Economics

Sorger, Gerhard | Professor
Department of Economics

Strobl, Günter | Professor
Department of Finance

Tang, Wenjie (with Tenure) | Assoc. Professor
Department of Accounting, Innovation and Strategy

Tyran, Jean-Robert | Professor
Department of Economics

Vetschera, Rudolf | Professor
Department of Business Decisions and Analytics

Wandschneider, Kirsten (with Tenure) | Assoc. Professor
Department of Economics

Weilinger, Arthur | Professor
Department of Business Law

Windsperger, Josef | Professor
Department of Business Decisions and Analytics

Zulehner, Christine | Professor
Department of Economics

Retired & Emeritus Professors

Emeritus and retired professors have the opportunity to continue their research at our faculty as professorial or senior research fellows, respectively. The designation of their function is based on the respective professorship they held: Full university professors (emeriti) are referred to as professorial research fellows after their retirement, associate professors (retired) are referred to as senior research fellows.

Below, we list retired and Emeritus professors, who were still associated with the faculty during 2021. They continued their work as lecturer (marked with *) and/or continued their research as professorial/senior research fellow at our faculty.

Emeritus professors

Bomze, Immanuel *

Diamantopoulos, Adamantios | Professorial Research Fellow

Pflug, Georg * | Professorial Research Fellow

Wagner, Udo * | Professorial Research Fellow

Wirl, Franz | Professorial Research Fellow

Retired Professors

Gutjahr, Walter * | Senior Research Fellow

Podczeck, Konrad * | Senior Research Fellow

Strauß, Christine *

Windsperger, Josef * | Senior Research Fellow

Non-Tenured Academic Staff

Below, we list non-tenured colleagues who are funded by regular university resources as well as externally funded personnel in alphabetical order by last name. Also, the departments/centres the faculty members are assigned to are specified.

In the section "Post-Docs" we list all faculty members of 2023 with a post-doc contract. Some of them are assistant professors who are on a so-called tenure track. This means that after fulfilling the qualification agreement, they are appointed as (tenured) associate professors. People on a tenure track are marked with *.

In the section "Prae Docs" we list all faculty members of 2022 with a prae-doc contract.

In the section "Other" we list academic staff who is not listed in the previous categories, but is associated with our faculty and has published scientific work or has contributed to research otherwise (e.g. as editor, organiser of conferences, etc.) in the year 2023.

Publications

This section reports on our research that has been published in the calendar year 2023. Most of our research is published in learned journals. Journals are divided in three broad categories in which our best publications can be assigned to "Category 1" and "Category 2" according to our Faculty Journal List (see Appendix). Those publications that cannot be assigned to either one of the two categories are summarized as "Other Journal Publications". Articles that have been accepted in learned Journals in the calendar year 2023 are listed as "Forthcoming".

Category 1 comprises the very top 10% journals. Members of our faculty have published a total of 20 articles in such journals and 14 are assigned to the category "Forthcoming". Category 2 journals are among the top 25% of their fields or are named as very good in selected field-specific complementary lists. We count 31 publications in such journals and 10 in the category "Forthcoming".

Other journal articles and other publications such as monographs and contributions to collected volumes and proceedings are also listed below. We do not list working papers.

The publications are listed alphabetically by author(s). Our **experts** (as listed in the previous chapter) are marked in blue. We report the underlying field(s) of research according to the research areas defined on page 3.

Theses Completed

Our PhD education offers training and supervision that allows students to acquire knowledge and skills necessary for a research-oriented career in the core fields of our faculty. The successful completion of the PhD programme marks the entry into the scientific community and it shows the ability to carry out independent research. We congratulate the 9 PhD students who completed their theses in 2023.

Doctoral / PhD theses

Editorial Work

Numerous members of our faculty – active as well as emeritus/retired – are engaged in editorial and publishing activities. In particular, many of our faculty members serve as editors, associate editors, or members of editorial boards of established journals. The list below shows who serves in which role for which journal. We do not list refereeing activities, as members of our faculty have, in total, most likely written several hundreds of these, and many of them serve as referees for prestigious journals.

Category 1 Journals

Editor-in-Chief, Co-Editor

Econometric Theory:
Pötscher, Benedikt (since 1995)

Associate Editor

American Statistical Association Journal:
Krivobokova, Tatyana (since 2019)

Journal of Business and Economic Statistics:
Hautsch, Nikolaus (since 2015)

Journal of Consumer Research:
Fuchs, Christoph (since 2021)

Journal of Marketing:

Externally Funded Research Projects

In this chapter we present our extensive research projects. The Faculty of Business, Economics and Statistics and its members engage in various research fields with multiple funding sources. Our biggest sponsors worth mentioning are the Austrian Science Foundation (FWF), the Austrian National Bank (OeNB) and the Christian Doppler Research Association (CDG). Funding as well as cooperation with other institutions and partners plays an essential part in our faculty's aim to research a broad range of scientific issues.

The table shows the annual income from both ongoing and completed third-party funded projects.

Sources of External Funding (in thousand €)

| | 2019 | 2020 | 2021 | 2022 | 2023 |
|--------------|----------------|----------------|----------------|----------------|----------------|
| FWF | 1,519.2 | 1,343.7 | 1,578.8 | 1,198.9 | 683.9 |
| OeNB | 158.7 | 117.9 | 431.8 | 629.6 | 379.0 |
| EU | - | 21.0 | 18.7 | 3.1 | 159.0 |
| FFG | 59.0 | 25.8 | 10.0 | 221.7 | 75.4 |
| WWTF | - | 533.0 | 6.3 | - | - |
| ÖAW | - | 9.5 | 47.5 | 67.4 | 25.5 |
| CDG | 122.2 | 63.6 | 84.0 | 83.6 | 85.7 |
| Other | 175.2 | 211.0 | 25.4 | 170.9 | 81.5 |
| Total | 2,034.3 | 1,845.3 | 2,202.4 | 2,375.2 | 1,490.0 |

Externally Funded Individual Projects

Pricing in imperfectly competitive markets (Research Groups)

Contact person(s): Daniel Garcia, Maarten Janssen, Eeva Muring, Philipp Schmidt-Dengler, Christine Zulehner (Research Group)
 Research area(s): Changing Market and Institutions (CMI)
 Funding body: FWF (Austrian Science Fund)
 Funding: 1,362,667.00 €
 2021 - 2026

Economists have formally studied pricing in imperfectly competitive markets since the mid nineteenth century. By analyzing the potential inefficiencies of such markets this research has guided regulatory and competition policy. With more and more transactions being shifted to online markets, research in this area remains highly relevant. The behavior of firms in imperfectly competitive markets is also studied in the management literature, with a stronger focus on strategies available to firms to become more profitable. Applications include bookings for hotel rooms, pricing of online airline tickets, as well as pricing in vertical contracts between firms.

This project brings together the economics and management literatures and studies pricing in imperfectly competitive markets both from an empirical and a theoretical perspective. Our analytical framework uses game-theoretic models to capture strategic behavior in imperfectly competitive markets. To carry out the empirical analysis, we resort to econometric methods. In doing so, we bring new tools to the study of classical questions. We also aim to tackle new issues related to online markets and algorithmic pricing. By interacting with competition authorities, the project also aims to deliver insights that are relevant for competition policy.

Universal Structures in Mathematical Finance

Contact person(s): Christa Cuchiero
 Research area(s): Changing Market and Institutions (CMI)
 Funding body: FWF (Austrian Science Fund)
 Funding: 1,200,000.00 €
 2020 - 2026

Universal structures in the sense of the current proposal pertain literally to both, finance and mathematics. On the financial side we mean robust empirical features that hold universally across different markets, asset classes and in particular over time. On the mathematical side it concerns universally appearing model classes and probabilistic properties, inherent in many at first sight unrelated phenomena. It is the purpose of this proposal to explore this mathematical and financial universality and to provide a unifying stochastic framework whose foundations have already been laid by the principal investigator and her co-authors in several works. In financial respect, the guiding universal structures are the stability of the capital distribution curves, as investigated in stochastic portfolio theory, and the rough volatility paradigm. Mathematically, it is on the one hand a generic non-Markovianity of at first sight naturally low dimensional objects, be it market capitalization

or volatility. On the other hand mathematical universality appears in form of infinite dimensional affine or polynomial processes as well as McKean Vlasov equations. It allows to treat universal phenomena from finance with universal stochastic methods. It is the first time that two major fields of mathematical finance, namely stochastic portfolio theory and contemporary stochastic volatility modeling, including multivariate rough and local stochastic volatility models, are considered from a common perspective. We believe that other areas in Mathematical Finance, for instance systemic risk, can be investigated in this new light. Beyond that we expect that the proposed work will lead to new insights in the theory of non-linear PDEs, McKean Vlasov equations, SPDEs and infinite dimensional stochastic analysis.

Austrian Corona Panel

Contact person(s): Bernhard Kittel
 Research area(s): Changing Market and Institutions (CMI), Human Behavior and the Economy (HBE)
 Funding body: FWF (Austrian Science Fund)
 Funding: 362,019.00 €
 2020 - 2023

The SARS-CoV-2 pandemic has changed everyday life in Austria like in many other countries. Despite the pervasive exposure to the virus and the common confrontation with severe restrictions in public and private life, every individual, family, and household is affected differently. The project aims to analyze the ramifications of the crisis on individual life in Austria in the short and longer term. The project traces the variation and development in public moods, attitudes, behaviors and communication styles of the Austrian population over time and from a long-term perspective. It addresses questions such as: How do people cope with the threats to their health and economic livelihoods? What do people think of different measures and policies of pandemic containment? What are their views on measures to mitigate the economic crisis? What do people consider as a threat to democracy and the political system as such? How does the crisis change people's communication patterns and social relationships? The study uses an online panel survey to collect repeated individual-level data representative of the Austrian population, fielded in monthly intervals.

Josef Ressel Centre for Adaptive Optimisation in Dynamic Environments (JRC AdaptOp)

Contact person(s): Karl Franz Dörner
 Research Theme: Data Science and Analytics (DSA), Management of Resources (MR),
 Funding body: CDG (Christian Doppler Forschungsgesellschaft)
 Funding: 331,904.00 €
 Duration: 2019 - 2024

The Josef Ressel Centre for Adaptive Optimisation in Dynamic Environments (JRC AdaptOp) identifies new applications in dynamic real-world environments and aims at the development of planning approaches that can

cope with continuously changing conditions. Dynamic optimisation problems (DOPs) in domains such as warehousing, production, and transportation are primarily addressed in this context. The workloads of gantry cranes, heavy-duty vehicles, and glass production lines are subject to optimisation. New DOPs within these domains will be formulated and new benchmarks will be created. The goal is to build a framework for open-ended adaptive methods, facilitating the detection of changes in the environment and the reaction to them. The integration of machine learning techniques to predict the occurrence of future events, devise potential future scenarios, and select and configure promising algorithms is also a major research focus. Finally, the methods' performances will be studied and compared within controlled simulation experiments and evaluated within real-world test environments at the JRC's industrial partners Industrie-Logistik-Linz GmbH (ILL), LiSEC Austria GmbH (LiSEC), Logistik Service GmbH (LogServ), and voestalpine Stahl GmbH (voestalpine). Abstract external module of the University of Vienna:

The University of Vienna, as an external module of the JRC, studies the transportation and intermediate storage of semi-finished casting products, so-called steel slabs, inside a steel-producing plant. Within the scope of intra logistical optimisation efforts, the research emphasis is threefold. First, solve a pickup and delivery problem that addresses the transportation of steel slabs as they pass multiple production stages, all of which are carried out at different locations inside the plant. Second, address the storage of work-in-process materials during the time they are buffered in large (outdoor) storage yards, waiting to be fed into the next stage of the production process. As the storage yards are organised in rows and function as two-dimensional stacking areas, consisting of stacks built up by steel slabs being located on top of each other, it is of utmost importance to ensure that the stacks remain organised while being manipulated during steel slab pickups or deliveries. Third, increase productivity by pre-marshalling slab yard stacks. This refers to the re-organisation of stacks such that varietal purity of stacks is maintained by making sure that slabs of a certain order or type are stored closely together in a desired sequence.

Understanding Social Mobility – An Experimental Approach

Contact person(s): Jean-Robert Tyran
 Research area(s): Changing Markets and Institutions (CMI), Human Behaviour and the Economy (HBE)
 Funding body: Jubiläumsfonds der österreichischen Nationalbank (OeNB)
 Funding: 246,000.00 €
 2021 - 2025

This project experimentally investigates the relevance of the following structural determinants of social mobility: the degree to which success is driven by luck rather than effort, discrimination, wage compression, and the degree of social stratification. We explore how different policy interventions such as income or inheritance taxes affect social mobility under varying structural conditions. We also investigate peoples' acceptance of alternative policy measures by the means of voting. We generate benchmark predictions that we put to a test in the economic laboratory.

EMIL: Exchange Mechanisms in Logistics

Contact person(s): Rudolf Vetschera
 Research area(s): Changing Markets and Institutions (CMI), management of Resources (MR)
 Funding body: FWF (Austrian Science Fund)
 Funding: 237,220.20 €
 2021 - 2024

The concept of shared transportation resources, also denoted as collaborative vehicle routing, is one of the hot topics in transportation and logistics. This can be explained by the growth of the e-commerce sector, which boosts competition and brings down prices. A collaboration can be described as a partnership between two or more companies to optimize operations by making joint decisions and sharing information, resources, or profits. In this project, we are focusing on horizontal collaborations, in which companies at the same level of a supply chain are sharing resources through the exchange of selected requests with their competitors. The main aim of this project is to increase the overall efficiency of the transport industry, in particular by avoiding costly and pollutive empty trips. This will be achieved by improving both the planning processes of individual carriers, and the collaborative reallocation of transport requests to carriers, who are willing to enter collaborations with decentralized planning. In particular, we want to develop mechanisms for the reallocation of requests between carriers to obtain a fair and efficient allocation of such requests. The core of the project is in transportation research, and it makes heavy use of concepts and methods from operations research, game theory, and market design.

Rechtsrahmen für Central Bank Digital Currencies in Österreich

Contact person(s): Martin Miernicki
 Research area(s): Changing Markets and Institutions (CMI)
 Funding body: Jubiläumsfonds der österreichischen Nationalbank (OeNB)
 Funding: 216,000.00 €
 2021 - 2024

The research project deals with the legal framework for the potential emission of Central Bank Digital Currency by the OeNB or the ECB and highlights the need for reforms de lege ferenda. For this purpose, the research explores which types of CBDC the OeNB could introduce on its own or with the authorization of the ECB as well as the steps necessary for the recognition as legal tender; liability risks for the OeNB and responsibilities with regard to personal data are discussed. Moreover, the project sheds light on the status of CBDC under Austrian private law (property, contractual relations) which includes an analysis of the relevant provision on the laws on consumer protection, rental contracts and employment relations. Furthermore, the status of CBDC under the supervision laws on AML/CTF, banking, payment services and securities as well as tax laws (income tax, VAT) is analyzed. Smart Contract applications (so-called programmable CBDC) are part of the research project.

Econometrics of Central Counterparty Risk

Contact person(s): Nikolaus Hautsch
 Research Theme: Changing Markets and Institutions (CMI)
 Funding body: FWF (Austrian Science Fund)
 Funding: 209,370.00 €
 2020 - 2023

A Central Clearing Party (or Central Counterparty or CCP) serves as the intermediary between the counterparties of a financial trade, is responsible for clearing and settlement and carries the counterparty risk during the settlement period. Since the 2007/2008 financial crisis, regulation in the U.S. and in Europe requires mandatory central counterparty clearing for all financial markets. Given the systemic importance of CCPs, surprisingly little research is performed on the quantification of CCPs risk exposure and the use of econometrics for efficient CCP risk management. In fact, an effective risk management of a CCP requires to account not only for the (time-varying) riskiness of the underlying instruments but also for (time-varying) correlations between instruments and member portfolios as well as trade-related risks due to intra-daily changes of members' portfolio allocations. In this project, we aim at developing and applying econometric tools for an efficient risk management of CCPs. The project has three major objectives: (i) Constructing and analyzing high-frequency based predictions of aggregated as well as member-based and instrument-based risk exposures and underlying correlation structures, (ii) quantifying trade-related risks due to changes in clients' trading positions, and (iii) the development of adaptive margin buffers avoiding pro-cyclicality effects due to excessive margins.

Econometrics of Systemic Risk: Inference, Model Comparison and Network Dependencies

Contact person(s): Nikolaus Hautsch, Jérémy Leymarie
 Research area(s): Data Science and Analytics (DSA)
 Funding body: Jubiläumsfonds der österreichischen Nationalbank, Österreichische Nationalbank (OeNB)
 Funding: 201,000.00 €
 2021 - 2025

Monitoring the systemic riskiness of financial companies is a central requirement for macroprudential regulation and assuring financial market stability. Point estimates of systemic risk, however, are of limited use without reliable statistical inference. The latter is urgently required to be able to assess the significance of differences between systemic risk estimates of individual banks or differences in systemic risk rankings. Likewise, rigorous procedures to backtest and to perform comparisons between systemic risk forecasts are essential to operationalize systemic risk measures in financial regulation. Similarly, econometric frameworks for capturing causal dynamic and simultaneous dependencies in possibly high-dimensional bank networks are important to identify major channels of how tail risk is spread through the system. The project is decomposed into three main tasks. The first task is to develop statistical inference for popular systemic risk measures, like MES, SES, SRISK or Delta CoVaR. We will derive corresponding asymptotic distributions semi-parametric-based inference in order to equip these measures with confidence intervals. This will allow us to make

statements of the statistical reliability of systemic risk estimates. The second task is to propose a statistical framework for comparing systemic risk models. We will propose a class of loss functions which enables us to jointly elicit MES and VaR. This allows us to rank MES estimates arising from alternative econometrics models and to pursue rigorous backtesting of competing forecasts. The third task will bring together network-based systemic risk measures with multivariate dynamic models for quantiles. We will propose a unifying approach to model causal as well as simultaneous dependencies in possibly high-dimensional financial networks.

Classification – Preprocessed and high-dimensional data sets

Contact person(s): Lukas Steinberger
 Research area(s): Data Science and Analytics (DSA)
 Funding body: FWF (Austrian Science Fund)
 Funding: 167,076.00 €
 2021 - 2025

In this project we study classification based on two types of preprocessing designed for imbalanced and confidential data sets. We also investigate consequences of high-dimensional features. Imbalanced data sets are known to significantly reduce the performance of classifiers in statistical learning which tend to be biased towards the majority class.

The second part of the project is concerned with classification based on training data satisfying a local differential privacy constraint. Differential privacy is an increasingly popular way to protect data owner's privacy while enabling the extraction of valuable information about the population. Finally, we will investigate the performance of classification methods when feature vectors are highdimensional and also explicitly include the numerical approximations used to practically implement those classifiers into the analysis. We will study the bias-towards-the-majority-class effect and will develop statistically efficient data reduction preprocessing within the majority class. We shall design new nonparametric classification algorithms which minimize this bias while not losing power with respect to the misclassification error. Secondly, we shall quantify the necessary loss of prediction performance due to the local differential privatization and design optimal privacy mechanisms and corresponding classification algorithms.

In the third part, we will study the misclassification error of classifiers trained using numerical approximation schemes like SGD, in a high-dimensional framework. The problem of imbalanced data will mainly be approached by subsampling methods and penalized risk minimization based on novel, modified penalty terms. For private data analysis, we adopt a minimax perspective and adapt existing private minimax lower bounds to the classification context. Finally, for the analysis of stochastic algorithms in high-dimensional problems we will rely on random matrix theory and a Marchenko-Pastur type asymptotic framework.

Next to no theoretical analyses of classification problems with imbalanced data exist. The same holds true for minimax optimal classification under differential privacy. Finally, numerical algorithms to train classifiers are usually

analyzed only for fixed feature dimension and as sample size increases. Thus, the results and methods we develop will be novel and highly relevant additions to the modern data analysts tool kit to deal with complex and high-dimensional data.

Supersmooth functional data analysis and PCA-Preprocessing

Contact person(s): Moritz Jirak
 Research area(s): Data Science and Analytics (DSA)
 Funding body: FWF (Austrian Science Fund)
 Funding: 167,076.00 €
 2021 - 2025

In this project, we study nonparametric regression and classification for functional data when the underlying regression functions and functional densities, respectively, are supersmooth. Based on a PCA-preprocessing technique, we anticipate polynomial convergence rates of the statistical procedures, which is in strong contrast to the usual asymptotics in nonparametric functional data analysis, where typically only logarithmic rates are available. For a thorough understanding of this phenomena, we aim to uncover the information theoretic complexity of this statistical problem and its interplay with the geometry of the underlying spaces. The second key objective is an early stopping procedure, intrinsically requiring our algorithm to learn an optimal selection of appropriate subspaces based on principal component approximations. In this context, we are particularly interested in computationally effective (sequential) procedures, also being robust with respect to heavy tails or dependencies. Moreover, the corresponding functional regression and classification problems shall be considered when no direct access to the data is available due to privacy constraints.

Paternity Leave: Monetary Incentives or Flexibility?

Contact person(s): Omar Bamieh, Lennart Ziegler, Christine Zulehner
 Research area(s): Changing Markets and Institutions (CMI)
 Funding body: Jubiläumsfonds der österreichischen Nationalbank (OeNB)
 Funding: 159,000.00 €
 2021 - 2023

Despite a large share of parental leave reserved for fathers in many countries, there is still a significant lack of fathers' involvement in caring for their children. Austrian fathers are among those who take very little paternity leave. According to an OECD policy report from 2016, men account for just 4% of parents taking parental leave in Austria, compared to the 20% OECD average and 40% in Nordic countries. Given the potential gains for mothers and children from fathers taking parental leave, there seems to be room for improvement in Austria. While there exists a large literature on the determinants and effects of parental leave of women, less is known for leave of fathers. Most of the previous studies focus on the consequences for families of extending paternity leave. Our project also aims to examine which features of parental leave policies increase take up of fathers.

This project aims to provide new evidence on the determinants and consequences of paternity leave. Specifically, we analyze whether financial incentives and flexibility considerations can contribute to higher take-up rates of parental leave. Our empirical analysis exploits exogenous variation due to the 2008 and 2010 parental leave benefit reforms in Austria. While the former reform introduced options of much shorter leave schemes, the latter reform additionally established an income-dependent benefit schedule. A combination of both reforms allows us to estimate effects of more flexible leave schemes as well as higher income replacement rates on take up and duration of paternity leave. Furthermore, we analyze how induced changes in parental leave affect future labor market outcomes of fathers and mothers.

On the Theory and Testing of Changing Choice Behavior

Contact person(s): Karl Schlag, Philipp Peitler
 Research area(s): Human Behaviour and the Economy (HBE)
 Funding body: Jubiläumsfonds der österreichischen Nationalbank (OeNB)
 Funding: 99,000.00 €
 2021 - 2023

In experimental economics, it is usually assumed that a subject's decision-making behaviour does not change in the course of the experiment. This restriction can lead to the economist mistakenly interpreting the subject's behaviour as a violation of a decision theory. On the other hand, assuming that behaviour can change arbitrarily makes falsification of the decision theory impossible. In this project, we develop a model in which decision behaviour can change, but which allows testable predictions. Furthermore, we conduct an experiment to test whether decision behaviour actually changes in the course of the experiment.

Essays on Distributional Macroeconomics – three interrelated projects studying the role of inequality and the distributional effects of several macroeconomic channels

Contact person(s): Philipp Schmidt-Dengler, Alexander Paul Hansak
 Research area(s): Human Behaviour and the Economy (HBE)
 Funding body: Austrian Academy of Sciences (ÖAW)
 Funding: 77,000.00 €
 2021 - 2023

Over the past few decades several countries have experienced an increase in inequality of wealth and income. Economic outcomes can lead to highly unequal distributions, but while this fact often spurs new debates among policy makers and the general public, it has long been neglected by macroeconomic models. Only since the early 2000s has the incorporation of explicit heterogeneity led to the emergence of models which try to explain why some people are rich, while others are poor. Especially due to the availability of high-quality micro-data and the development of powerful computational methods have such heterogeneous agent models become widely used. Hence, nowadays there exist several studies showing how "inequality matters for macro and macro matters for inequality". My dissertation consists

of three interrelated projects studying the role of inequality and the distributional effects of several macroeconomic channels. I want to contribute to the existing literature by shedding light on different phenomena and by using quantitative macroeconomic models to produce new insights. The first chapter is concerned with the distributional effects of tax evasion and the implications of incomplete tax compliance on macroeconomic aggregates. Thus, I introduce tax evasion into a general equilibrium model with heterogeneous agents who can invest in intermediate goods and pay taxes on their realized gains. A preliminary solution of the model shows how tax evasion leads to higher inequality and that despite these considerable distortionary effects capital income taxation is still desirable. In the second project I then plan to analyze whether the observed rise in inequality causally lead to an increase in household debts. If households feel like they are losing out, they are inclined to hold higher debts in order to keep up with the rest. This 'keeping up with the Joneses' effect is lacking in the quantitative literature so far. Consequently, I set up an overlapping generations model with consumption externalities where individuals compare their own utility with a reference group. Moreover, I will allow for bankruptcy to occur in equilibrium and hence, higher debt holdings will also lead to higher loan prices. Lastly, in the third chapter I want to study credit markets where creditors can shroud add-on prices to exploit consumer myopia, which potentially creates high inefficiencies for both naive and sophisticated borrowers. This could have drastic consequences for the question of whether and how to regulate the market for consumer credit and since heterogeneity plays an important role for welfare implications, this question is best analyzed within a quantitative model. Thus, this project will add to the existing literature by introducing a framework with shrouded add-on prices into an incomplete markets model, which will allow to assess several regulatory policies, including the Credit CARD Act of 2009.

Ulysses Contest – Digital Student Competition on Family Business

Contact person(s): Emmanuella Plakoyiannaki
 Research area(s): Corporate Strategies and Processes (CSP), Human Behavior and the Economy (HBE)
 Funding body: European Commission
 Funding: 31,085.00 €
 2021 - 2023

ULYSSES has been designed to become the 1st fully digital European student competition that focuses entirely and explicitly on family businesses (FB). To put this endeavor into practice, we will build up sustainable and regionally embedded university-industry interaction networks that input structurally well prepared and complex real business challenges into a digitally based student competition – the Ulysses Contest. We will do so on the basis of an innovative virtual learning and teaching platform that will be tailored to the functional needs of the student contest as well as to the individual user-groups (students, educators, family business stakeholder) requirements. As such, our project will drive change for the benefit of a new form of digitally integrated entrepreneurship education within the partners institutions and beyond.

International Business – Strategies for Integrated Europe

Contact person(s): Rudolf Vetschera
 Co-Project Manager: Oksana Galak
 Research area(s): Corporate Strategies and Processes (CSP), Management of Resources (MR)
 Funding body: European Commission
 Funding: 30,000.00 €
 2020 - 2023

European integration created the environment with unique opportunities, but also with distinctive challenges for the European companies. Globalization, political changes of the last 60 years, liberalization of trade, labor and investment flows, as well as the growth of IT influenced all countries of the world, but probably were the most pronounced in the European Union. How did real sector respond to these changes? What does it take to be a successful business in the EU? What are the prospects for EU companies in the next decades? These questions need to be raised and discussed today with those young people who will create a backbone of the economic growth in the next decades, as the success of the EU, both as an economic and political union, will to a large extent depend on their success as entrepreneurs, business leaders, policy makers and engaged citizens. Our primary focus in this project is on master level students of the economic and business specialization of the University of Vienna – the largest educational institution in Austria.

Polynomial Volterra Finance

 Funding: 6,000.00 €
 2022 - 2023

Financial Mistakes and Credit Market Regulation

Contact person(s): Florian Exler
 Research area(s): Changing Markets and Institutions (CMI)
 Funding body: Jubiläumsfonds der österreichischen Nationalbank (OeNB)
 Funding: 150,000.00 €
 2022 - 2023

Financial contracts are complicated and consumers run the risk of making mistakes. They underestimate obligations or pay too late, leading to high penalties and possibly payment difficulties. Credit markets have therefore been reformed in both the EU and the USA. Despite the importance of financial errors for consumers and regulators, they play an important role in quantitative models, models used to evaluate such reforms. Our project aims to fill this gap. We develop a model in which financial errors are considered for the first time in order to the impact on efficiency and welfare of recent credit market reforms and the potential of to analyse the potential of improved financial education and consumer literacy.

Digitale Zentralbankwahrung: Design, Verwendung und makrokonomische Implikationen

Contact person(s): Paul Pichler
 Research area(s): Changing Markets and Institutions (CMI)
 Funding body: Jubilumsfonds der sterreichischen Nationalbank (OeNB)
 Funding: 249,000.00 
 2022 - 2025

The proposed project seeks to facilitate improve the scientific assessment of the desirability of a Central Bank Digital Currency (CBDC) by developing a formal framework to better quantify its potential benefits and costs. It will focus on the systematic comparison of different potential designs of CBDC and the intensive versus extensive margin of adoption, i.e., who is likely to adopt CBDC and for what transactions will CBDC likely be used. The first part of the project will develop a payment instrument choice model of CBDC, the second part will incorporate CBDC into a macroeconomic model and study the effects of its introduction on financial and macroeconomic aggregates such as credit creation and output.

Common Ownership and Systemic Risk in the Banking Sector

Contact person(s): Thomas Gehrig
 Research area(s): Changing Markets and Institutions (CMI)
 Funding body: Jubilumsfonds der sterreichischen Nationalbank (OeNB)
 Funding: 190,000.00 
 2022 - 2026

The project documents the rise in common ownership in European banks by global investment funds since the Great Financial Crisis in 2007/8. This rise in common ownership is primarily concentrated in globally systemically important banks that are the main drivers of systemic risk exposure. Moreover, we identify significant differences in the ownership patterns of funds with a seemingly long-term orientation and funds with shorter investment horizons. The analytical part of the project aims to identify the underlying drivers of common ownership and assess the question of whether, ultimately, supervisors should be concerned about potentially destabilizing consequences and systemic risk caused by increasing common ownership.

AI-based planning for greener train operations

Contact person(s): Jan Fabian Ehmke
 Research area(s): Data Science and Analytics (DSA), Management of Resources (MR)
 Funding body: FFG (Austrian Research Promotion Agency)
 Funding: 242,261.00 
 2022 - 2025

In this project, the focus is on the planning of green railway operations. To this end, we will develop and investigate new techniques for resource planning considering environmental objectives such as minimizing energy consumption. These techniques will be AI-based and include simheuristics that learn to solve resource planning

problems by combining simulation and optimization. We want to overcome the significant challenge of modelling energy consumption in a way that simheuristics can create green schedules for trains and drivers. This requires the analysis and aggregation of real-world energy consumption data provided by BB, modeling of resource planning, as well as defining AI-based interaction between simulation and heuristic optimization.

Pro-aktive Tourenplanung fr Kurzfrist-Testung in Pandemien

VIPES - Verlassliche und integrierte Planung von Umlufen und Schichten in Eisenbahnsystemen

Contact person(s): Jan Fabian Ehmke
 Research area(s): Data Science and Analytics (DSA), Management of Resources (MR)
 Funding body: FFG (Austrian Research Promotion Agency)
 Funding: 291,782.00 
 2022 - 2025

The planning of resources in railway systems is a challenge due to the large number, complexity and interactions between infrastructure, traction units and personnel. The aim of planning is to ensure efficient and reliable railway operations. Due to the complexity of the overall railway system, resource planning for traction units and personnel is usually sequential. The primary objective is to minimise minimise costs, assuming that no delays or cancellations occur. However, especially with tight rotation and shift schedules, any disruptions that occur jeopardise disruptions jeopardise the reliability and, as a result, the efficiency of the entire railway system. The aim of this project is to optimise both the train schedules for traction units and the shift train crews in such a way that they are efficient and reliable. In order to optimise the quality of the plans determined using mathematical optimisation models and sophisticated solution methods in a realistic environment, they are evaluated in detail by an agent-based simulation. The great advantage of agent-based simulation is the possibility of analysing all relevant details and evaluating their reliability. Optimisation models, on the other hand, must abstract from the details of the of the overall railway system in order to find satisfactory solutions within acceptable runtimes. In order to achieve the goal of efficient and reliable plans at the same time, it is important to achieve intelligent interaction between optimisation and simulation. The simulation results in complex performance indicators that require an exchange of information between mathematical optimisation models, solution methods and agent-based simulation and thus significantly increase the quality of information in planning. To this end, existing approaches such as mathematical optimisation models and associated solution methods in order to incorporate information on delays and other disruptions into the

planning process. Previous approaches only have a rudimentary exchange of information, which is limited to a small amount of predefined information and which is usually not automated. Within the framework of VIPES, we are explicitly focussing on the effective exchange of information between optimisation-based planning and simulation-based evaluation. An AI-based component identifies and analyses structures of efficient and reliable solutions and uses these findings to optimise the mathematical optimisation and the evaluation of results in a targeted manner with the necessary information in a targeted and smart way. Finally, the planning of traction units and personnel, which was previously separate, is integrated into a comprehensive simheuristic. The digital technologies developed will help to improve the efficiency and reliability and reliability of the transport services operated by ÖBB. A contribution will also be made by will also be the creation of rotation and shift schedules that are easier to explain in practice and therefore more likely to be accepted by operators and staff. The consortium is led by DWH GmbH and also consists of ÖBB Produktion GmbH, the University of Vienna (UW) and the Technical University of Dresden (TUD). DWH GmbH is responsible for agent-based simulation, analysing fault data and project management. ÖBB provides the necessary infrastructure and delay data and is available for discussions on the relevant planning problems. The TUD will further develop mathematical models for the circulation and shift and shift planning as well as suitable solutions. The UW will model disruptions using reliability models and design an AI-based control system that provides a smart interface between mathematical optimisation and agent-based simulation.

Optimierungs- und Planungsverfahren für die Einsammlung von Plastik und Metall

Contact person(s): Karl Franz Dörner
 Research area(s): Management of Resources (MR)
 Funding body: FFG (Austrian Research Promotion Agency)
 Funding: 12,500.00 €
 2022 - 2023

The company Grundner GmbH approached the University of Vienna with the request to develop and evaluate an optimisation and planning process for the collection of plastic and metal. The questions were to be developed as part of an innovation cheque for the client, who research results as a basis for planning its delivery tours in a specific collection area, but also as a basis for further system development. The aim should be that the company Grunder can use this system for the planning of collection areas. Fleet size, unloading points and various time and volume restrictions should be taken into account. The detailed questions described below are based on the extensive experience of the logistics working group at the working group at the Institute for Business Decisions and Analytics at the University of Vienna will be worked on.

 Funding: 128,935.00 €
 2023 - 2026

Due to pandemic-related measures, researchers have been forced to interact with current and potential future collaborators almost exclusively via virtual communication tools. We plan to investigate how this lack of direct face-to-face interactions might change the way researchers collaborate on joint projects and how this might then change the quality of the resulting research. In particular, we will compare how these effects might differ between demographic groups, focussing especially on female researchers, early career researchers and researchers with international backgrounds.

Project 1: Adoption Costs of Financial Innovation; Project 2: Merchant Acceptance Survey Wave

 Research area(s): Changing Markets and Institutions (CMI)
 Funding body: Bank of Canada
 Funding: 17,000.00 €
 2023 - 2024

Heterogeneous risk preferences, entrepreneurship, and wealth inequality

Contact person(s): Monika Gehrig-Merz
 Research area(s): Human Behavior and the Economy (HBE)
 Funding body: Jubiläumsfonds der österreichischen Nationalbank (OeNB)
 Funding: 163,000.00 €
 2023 - 2026

We study the role of heterogeneous risk preferences as determinants of entrepreneurial decisions and their implications for wealth inequality. We ask how individuals' risk attitude affects their choice of becoming a risk-bearing entrepreneur as opposed to a wage worker with a stable income, and how this affects wealth accumulation via savings/investment and hiring decisions. We combine survey evidence on subjective risk attitudes with individual responses to hypothetical lottery questions and infer individual measures of risk aversion. Empirically, we investigate the importance of risk attitudes for individuals to transition to self-employment. We use these empirical insights in a quantitative life-cycle model.

Anti-migration sentiments: Parochial vs. conditional altruism

Contact person(s): Christian Koch
 Research area(s): Human Behavior and the Economy (HBE)
 Funding body: Diligentia Stiftung
 Funding: 21,000.00 €
 2023 - 2025

Large-scale immigration frequently provokes a backlash among native populations. Conventional wisdom attributes this reaction to a near-universal distaste for sharing resources across ethnic lines. Recent studies, however, challenge this claim. It appears that what is often interpreted as parochial altruism may actually be a form of conditional altruism, where group boundaries serve as a means to determine who is likely to cooperate. The activation of these latent group boundaries may also be facilitated by competition for

scarce resources. This research project seeks to investigate the extent to which cultural concerns are mediated by economic conditions and associated fairness perceptions. To accomplish this, we propose to conduct a tailored online experiment involving Germans and Turks, where we can manipulate whether economic and cultural concerns align or not.

Environmental policy under political pressure

Contact person(s): Gerhard Sorger
 Research area(s): Changing Markets and Institutions (CMI)
 Funding body: Jubiläumsfonds der österreichischen Nationalbank (OeNB)
 Funding: 87,000.00 €
 2023 - 2025

Climate change poses major challenges for governments around the world. A particularly important aspect of the transition from traditional economy to a carbon neutral one is that it necessarily creates economic winners and losers. Individual companies or entire industries that are dependent on the use of fossil fuels lose part of their business basis, while other industries benefit immensely from the transition. This situation creates a favorable breeding ground for lobbying and other forms of political influence. The proposed project aims at contributing to the understanding of this problem by modeling climate policy as a dynamic hierarchical game between political interest groups on the one side and the government on the other.

Steuerung der Online-Suche mit Big Data

Contact person(s): Maarten Janssen
 Research area(s): Data Science and Analytics (DSA)
 Funding body: FWF (Austrian Science Fund)
 Funding: 372,429.75 €
 2023 - 2027

The internet has completely reshaped consumer markets. One important issue is that much more so than in traditional brick-and-mortar markets there is a crucial role for online search platforms, such as Google, Tripadvisor or Booking.com, to bring together supply and demand. Consumers search for certain keywords and using large datasets on consumer search activities these platforms present a ranking of firms that may be key-word relevant thereby steering consumers to search firms in a certain order, affecting their eventual purchases. Search platforms (as gateways to online markets) may rank the products in the order they think would best fit the consumer preferences, but they may also obfuscate the ranking. Many of these search platforms also have so-called "sponsored positions" at the top of their ranking where firms compete and pay to be included. Casual evidence suggests that using search data to steer consumer search is highly profitable. To evaluate the welfare consequences of the behaviour of search platforms, the effects of steering search should be modelled explicitly. In this project, I aim to evaluate the different incentives of platforms to use their big data to steer consumer search, the incentives of firms to bid to get into sponsored positions, and how this shapes the competitiveness of markets and consumer well-being.

AIROW - Artificial Intelligence in Rowing

Contact person(s): Nikolaus Hautsch
Research area(s): Data Science and Analytics (DSA)
Funding body: Federal Funding
Funding: 973,394.00 €
2022-2025

This project will bring together methodological competence in statistics, machine learning and computer science with current developments in sport sciences as well as technological progress in wearables and medical diagnostics in order to optimize training load of top athletes in endurance sports. We will collect and process „big data“ from training and performance processes of individual athletes and will use state-of-the-art machine learning technology in order to measure effective training load, to predict the effect of training impulses and to optimize training management. It will be carried out as a pilot project in cooperation with the Austrian Rowing Federation and will be tailored to the specific needs and conditions in rowing. In a later stage, the insights gained from the project will be transferred to disciplines with similar training contents and requirements, such as swimming, triathlon, cycling, cross-country skiing and long/mid-distance running. The project will bring together researchers from statistics, computer science, mathematics, sports science and sports medicine. While being practically highly relevant in order to strengthen the competitiveness of Austrian top-level sports, the project will be scientifically challenging and will produce novel insights and findings. The project is funded by the Bundesministeriums für Kunst, Kultur, öffentlichen Dienst und Sport and will be carried out by the Research Network Data Science and the Institute of Sports Science of the University of Vienna in collaboration with the Austrian Rowing Federation.

Graduate Schools

VGSCO

Vienna Graduate School on Computational Optimization

Contact person(s): Immanuel Bomze, Radu Ioan Bot, Monika Henzinger, Arnold Neumaier
 Partner institutions: Faculty of Mathematics, Faculty of Computer Science, Vienna University of Economics and Business (WU), Vienna University of Technology (TU), Institute of Science and Technology Austria (IST)
 Research area: Data Science and Analytics (DSA)
 Funding body: FWF (Austrian Science Fund)
 Funding: 2,056,866.00 € (total funding of project)
 2020 - 2024 (2nd funding period)

The Vienna Graduate School on Computational Optimization (VGSCO) is a joint initiative between the Faculty of Business, Economics and Statistics, the Faculty of Mathematics and the Faculty of Computer Science (all 3 of University of Vienna), the Vienna University of Economics and Business (WU), the University of Technology Vienna (TU) and the Institute of Science and Technology Austria (IST) funded by the Austrian Science Funds (FWF). The Vienna Graduate School on Computational Optimization offers lecture series given by international experts in optimization related fields, organizes research seminars, retreats, soft skills courses, scientific workshops, and social events, provides travel grants, and supports research stays abroad. The short-time goal of the research and training programme of this Graduate School (DK+ programme) is to give the PhD candidates a comprehensive training in optimization with special emphasis on algorithmic and computational aspects as well as to prepare them for a scientific career by introducing them into the scientific networks of the participating scientists. The structure of the programme also allows to study the relations between different areas of optimization. In the long term we will foster collaboration between the members and their respective institutions in order to make Vienna a place of excellence in Computational Optimization. The first funding period ended in spring 2020; an extension of funding has been successfully applied for. The VGSCO is now run by the Faculty of Mathematics, but our faculty is still involved.

VGSE

Vienna Graduate School of Economics

Contact person(s): Maarten Janssen, Philipp Schmidt-Dengler
 Research area(s): Changing Market and Institutions (CMI), Human Behavior and the Economy (HBE)
 Funding body: FWF (Austrian Science Fund)
 Funding: 1,673,967.99 €
 2010 - 2015
 2017 - 2023

VGSE offers a challenging and rigorous PhD programme in economics. The school aims at attracting the very best students from Austria. Students train to become independent

researchers and teachers. The faculty members associated with VGSE are recognized by their peers as experts in their respective fields and are well connected to the international research community. The research areas of the faculty involved are closely interrelated, and together span both theoretical and applied topics that are of interest to PhD students. Students obtain full funding to spend most of the three years on research for their dissertation. They present their research in internal seminars attended by their peers and VGSE faculty as well as international conferences. They defend their dissertation before a committee including external faculty. Successful graduates from VGSE take academic jobs, or high level positions government and international organizations, as well as the private sector.

OMDS

Oskar Morgenstern Doctoral School

Speaker: Thomas Gehrig
 Track Chairs: Christa Cuchiero, Thomas Gehrig, Jan Fabian Ehmke, Markus Georg Reitzig, Philipp Schmidt-Dengler
 Scientific Coordinator: Katherine Xueting Dou

The Oskar Morgenstern Doctoral School (OMDS) was opened at the Faculty of Business, Economics and Statistics in October 2023. The OMDS is dedicated to the renowned economist Oskar Morgenstern. Morgenstern was a professor at the faculty until 1938 and, in collaboration with the mathematician John von Neumann, founded the research field of game theory, which is located between economics and mathematics. The Oskar Morgenstern Doctoral School (OMDS) imparts problem consciousness and the analytical skills required by future academic leaders and top researchers to excel and create lasting impact in society. By combining a theory-based approach with modern empirical, experimental, statistical, and computational methods, future leaders of the industry and academia will be well equipped with cutting-edge methods to manage the complex societal challenges in economics and business. The OMDS unites at the moment the following 5 tracks: Business Analytics, Logistics, and Operations Research (BALOR), Economics (Vienna Graduate School of Economics - VGSE), Finance (Vienna Graduate School of Finance - VGSF), Management and Statistics and Data Analytics (Abraham Wald).

Dissemination of Research

This section lists activities in disseminating, discussing and debating research by our faculty members, starting with talks by speaker(s) in chronological order. We then state workshops that have been (co-)organised by members of our faculty, as well as presentations in one of our seminar series. We close this section by indicating awards and fellowships received in 2023.

ESA World meeting

Jean-Robert Tyran (Participant)
26 - 30 Jun 2023

13th ifo Conference on Macroeconomics and Survey Data

Brigitte Hochmuth (Participant)
22 -23 Jun 2023

ESA World meeting

Jean-Robert Tyran (Participant)
26 - 30 Jun 2023

Fourth Conference on Financial Stability

Gyöngyi Loranth (Participant), Julian Kolm (Participant),
Albert Banal-Estañol (Participant)
29 - 30 Jun 2023

6th Workshop on International Economic Networks (WIEN), University of Vienna

Alejandro Cunat (Organiser)
7 - 8 Jul 2023

Financial Mathematics Team Challenge

Francesca Primavera (Participant)
10 - 20 Jul 2023

11th International Conference on Contemporary Marketing Issues

Emmanuella Plakoyiannaki (Organiser)
12-15 Jul 2023

10th Conference of the European Survey Research Association (ESRA)

Ernest Albert (Participant)
17 - 21 Jul 2023

Meeting of the Working Group Operations Research in Health Care and Disaster Management of the Austrian Society of Operations (during the ORAHS 2023 Conference)

Marion Rauner (Organiser), Margit Sommersguter-Reichmann (Organiser), Patrick Hirsch (Organiser)
21 Jul 2023

International Symposium in Finance (BAM)

Angelos Angelakis (Participant)
22 - 23 Jul 2023

Cambridge Disinformation Summit 2023

Ulrich Schäfer (Participant)
27 - 28 Jul 2023

BIRS Workshop: Stochastic Analysis, Mathematical Finance and Eco-nomics

Christa Cuchiero (Organiser)
1 Aug 2023

World Finance Conference 2023

Thomas Gehrig (Advisor)
2 - 4 Aug 2023

European Finance Association 2023

Thomas Gehrig (Advisor)
16 - 19 Aug 2023

V. Annual Conference of Experimental Sociology

Bernhard Kittel (Participant)
31 Aug 2023

Scandinavian Accounting Research Conference

Ulrich Schäfer (Participant)
1 - 2 Sep 2023

Wolfgang Pauli Workshop: Stochastics, Statistics and Machine Learning and their Applications to Sustainable Finance and Energy Markets

Christa Cuchiero (Organiser), Viktoria Schildhammer (Organiser)
1 Sep 2023

Theoriebildung und Theorieprüfung in der analytisch-empirischen Soziologie

Bernhard Kittel (Participant)
6 - 7 Sep 2023

47. Jahrestagung der Deutschen Steuerjuristischen Gesellschaft

Daniela Hohenwarter-Mayr (Participant)
11 - 12 Sep 2023

Research visiting period

Francesca Primavera (Participant)
17 Sep - 17 Nov 2023

SynchroTrans 2023

Christian Tilk (Participant)
21 - 22 Sep 2023

38th Workshop of the Austrian Working Group on Banking and Finance

Günter Strobl (Organiser)
22 - 23 Sep 2023

VfS Regensburg, Meeting of the German Economic Association,

Brigitte Hochmuth (Participant)
24 - 28 Sep 2023

7th SAFE Market Microstructure Conference

PhD Course: Quantum Computing for Finance- held by Prof. Antoine Jacquier

Christa Cuchiero (Organiser)
4 - 7 Dec 2023

ISOR Colloquium

Tatyana Krivobokova (Organiser),
Lukas Steinberger (Organiser)
11 Dec 2023

Seminar Series

Our seminar series are platforms to discuss recent and ongoing research. The exchange of ideas takes place in a more or less informal atmosphere. A brown-bag seminar is more informal and ideal to discuss new ideas and work in progress while senior researchers tend to present polished papers in a departmental seminar. Our seminar series are organised and funded by our departments and centres.

Vienna Joint Economic Seminar

Price competition, Information Acquisition, and Product Differentiation Perception

Gary Biglaiser (University of North Carolina)
9.3.2023

Inequality and optimal exchange-rate policy

Edouard Challe (Paris School of Economics)
16.3.2023

Experimental Evidence on Aspirations as Constraints to Microentrepreneurship

Catia Batista (Nova School of Economics and Business)
23.3.2023

Foreign Portfolios and Domestic Business Cycles with Heterogeneous Agents

Ralph Lütticke (Karl-Eberhardt Universität Tübingen)
30.3.2023

The Effect of Independent Online Media in an Autocracy

Ruben Enikolopov (Universität Pompeu Fabra)
20.4.2023

The Emergence of Procyclical Fertility: The Role of Breadwinner Women

Sena Coskun (Friedrich-Alexander Universität Erlangen - Nürnberg)
27.4.2023

Motherhood Timing and the Child Penalty: Bounding the Returns to Delay

Andreas Steinhauer (University of Edinburgh)
4.5.2023

Distaste for Advertisements in Two-Sided Markets: Evidence from Free-to-AirTV

Rosa Ferrer (Universität Pompeu Fabra)
11.5.2023

Bonus Question: How Does Incentive Pay Affect Unemployment Dynamics?

Jonathon Hazell (London School of Economics)
25.5.2023

Quality and Imperfect Competition

Germain Gaudin (Universität Freiburg)
1.6.2023

Is the Price Right? The Role of Economic Tradeoffs in Explaining Reactions to Price Surges

Nicola Lacetera (University of Toronto)
15.6.2023

Calibrated Clustering and Analogy-Based Expectation Equilibrium

Philippe Jehiel (Paris School of Economics)
29.6.2023

Racing with a Rearview Mirror: Innovation Lag and Investment Dynamics

Nicolas Klein (University of Montreal)
5.10.2023

Personalized Pricing and Competition

Andrew Rhodes (Toulouse School of Economics)
12.10.2023

Gender inequality over the life cycle, information provision and policy preferences

Silke Übelmesser (Friedrich-Schiller-Universität Jena)
19.10.2023

How Realis Hypothetical? A High Stakes Test of the Allais Paradox

Theo Offerman (University of Amsterdam)
23.11.2023

ISOR Colloquium

Bootstrap Consistency for the Mack Bootstrap

Carsten Jentsch (TU Dortmund University, Germany)
09 Jan 2023

Guarantees for Generative Models without Domination

Arnak Dalalyan (CREST and ENSAE, France)
16 Jan 2023

Autoregressive categorical time series. Theory and inference

Lionel Truquet (CREST-ENSAI, France)
23 Jan 2023

Public presentation of PhD projects (FÖP)

Georg Köstenberger (University of Vienna)
30 Jan 2023

Stochastic Liquidity as a Proxy for Nonlinear Price Impact

Johannes Muhle-Karbe (Imperial College London, United Kingdom)
06 Mar 2023

Prediction and testing of mixtures of translated features

Cristina Butucea (CREST, ENSAE, IP Paris, France)
27 Mar 2023

Nonparametric estimation under Gaussian measurement error with conditionally heteroscedastic variances

Alexander Meister (University of Rostock, Germany)
17 Apr 2023

Some statistical inference results for interacting particle models in a mean-field limit

Marc Hoffmann (Université Paris-Dauphine, France)
24 Apr 2023

Stein effect for estimating many vector means: a "blessing of dimensionality" phenomenon

Gilles Blanchard (Université Paris Saclay, France)
08 May 2023

On robustness and local differential privacy

Thomas Berrett (University of Warwick, United Kingdom)
15 May 2023

Statistical methods for the restoration of historical music recordings

Rainer Dahlhaus (Ruprecht Karl University of Heidelberg, Germany)
22 May 2023

Learning Robustly from Multiple Sources

Christoph Lampert (Institute of Science and Technology Austria, Austria)
12 Jun 2023

From copulas and depth to measure transportation: the long quest for multivariate quantiles and ranks

Marc Hallin (ECARES and Department of Mathematics, Université libre de Bruxelles, Belgium)
19 Jun 2023

Selective inference techniques using randomization for group lasso estimators

Gerda Claeskens (Katholieke Universiteit Leuven, Belgium)
09 Oct 2023

Breiman's Samplers or Models? There is a little but important difference: Models, including priors, can be wrong!

Yannis Yatracos (Visiting Professor at University of Vienna)
16 Oct 2023

Early stopping in iterative learning methods

Markus Reiß (Humboldt-University Berlin, Germany)
23 Oct 2023

Rank-transformed subsampling: Inference for multiple data splitting and exchangeable p-values

Rajen Shah (University of Cambridge, England)
13 Nov 2023

Bootstrapping high-dimensional sample covariance matrices

Angelika Rohde (University of Freiburg, Germany)
20 Nov 2023

Machine learning beyond the data range: an extreme value perspective

Sebastian Engelke (University of Geneva)
27 Nov 2023

Testing statistical hypothesis in Inverse Problems

Frank Werner (Julius Maximilian University of Würzburg, Germany)
11 Dec 2023

Finance Research Seminar (VGSF)

The CO2 Question: Technical Progress and the Climate Crisis
Marcin Kacperczyk (Imperial College London)
03 Mar 2023

A Supply and Demand Approach to Capital Markets

Laurent Calvet (EDHEC Business School)
10 Mar 2023

An Intangibles-Adjusted Profitability Factor

Robert Korajczyk (Kellogg School of Management)
17 Mar 2023

Why Women Earn Lower Real Estate Returns

Paolo Sodini (Stockholm School of Economics)
24 Mar 2023

Macroeconomic Announcements and the News that Matters Most to Investors

Martijn Boons (Tilburg School of Economics and Management)
14 Apr 2023

Labor Mobility, Human Capital Investment, and Technological Change

Yufeng Wu (University of Illinois at Urbana-Champaign, Gies College of Business)
21 Apr 2023

The Subjective Risk and Risk Premia of Institutional Investors

Citation-Based Ranking

The tables below provide a citation analysis for our tenured faculty and our professorial/senior research fellows (n = 54)¹ based on Scopus as of August 2024 taking the data into account up until and including the year 2023. This data-base is also used by the quality assurance unit of the university.

The table on the left shows the distribution of citations and the ranking of individuals by the total number of citations. The table on the right shows the distribution of citations and the ranking of individuals by Hirsch index *h*. The lower part of each table indicates the names of the faculty members who rank first according to these metrics. In case of faculty members achieving the same scores, we rank those in ascending order by age.

| | | Research impact by total number of citations | |
|---------------------------|------------------------|--|--------------------|
| Distribution of citations | Number of citations | Percentage of faculty members | |
| | 0-50 | 7% | |
| | 51-100 | 0% | |
| | 101-300 | 26% | |
| | 301-500 | 11% | |
| | 501-1000 | 13% | |
| | > 1000 | 43% | |
| | Ranking of individuals | 1 | Diamantopoulos, A. |
| 2 | | Hartl, R. | |
| 3 | | Dörner, K. F. | |
| 4 | | Gutjahr, W. | |
| 5 | | Kocher, M. | |
| 6 | | Pflug, G. | |
| 7 | | Plakoyiannaki, E. | |
| 8 | | Fuchs, Chr. | |
| 9 | | Bomze, I. | |
| 10 | | Tyran, J-R. | |

| | | Research impact by Hirsch index <i>h</i> | |
|---------------------------|------------------------|--|--------------------|
| Distribution of citations | h-index | Percentage of faculty members | |
| | 0-2 | 2% | |
| | 3-5 | 9% | |
| | 6-10 | 28% | |
| | 11-15 | 17% | |
| | 16-20 | 13% | |
| | > 20 | 31% | |
| | Ranking of individuals | 1 | Diamantopoulos, A. |
| 2 | | Hartl, R. | |
| 3 | | Dörner, K. F. | |
| 4 | | Gutjahr, W. | |
| 5 | | Kocher, M. | |
| 6 | | Pflug, G. | |
| 7 | | Plakoyiannaki, E. | |
| 8 | | Tyran, J-R. | |
| 9 | | Bomze, I. | |
| 10 | | Wirl, F. | |

¹ The discussion here does not consider the law professors Hohenwarter-Mayr and Weillinger because publications in legal science follow different logics and patterns.

Faculty Journal List 2023

About the Faculty Journal List

The Faculty Journal List (FJL) is a dynamic, annually updated list that provides information on which journals are defined as Category 1 or Category 2 within the faculty. This definition was adopted in 2015 by the Research Commission and approved by the Faculty Board at the recommendation of the Scientific Advisory Board. The list is newly compiled at the beginning of every year and thus serves to retrospectively categorize the publications of the previous year.

For this purpose, the current individual lists of the different subject areas – citation indices **SSCI** (Social Sciences Citation Index) & **SCIE** (Science Citation Index Expanded) are taken from the Web of Science (Web of Science Core Collection – Web of Science Group) and ranked according to the respective Article Influence Scores of the journals.
clarivate.com/webofsciencegroup/solutions/web-of-science

The top 10% of the journals in these individual lists are listed as Category 1 journals in the FJL. The remaining journals of the top 25% of the individual lists are assigned to Category 2 (see Figure 1).

Figure 1: Categorization of Journals (citation indices SSCI & SCIE)

Additionally, four so-called complementary lists are included in the ranking. These include:

- **Business:** Jourqual 3.0. This ranking is based on the judgment of professors in Business in the German speaking area. There are two top levels in this ranking: The "A+" journals are assigned to Category 1, the "A" journals to Category 2 of the FJL. vhbonline.org/vhb4you/vhb-jourqual/vhb-jourqual-3
- **Economics:** Handelsblatt-VWL-Ranking. All journals in EconLit are considered for the ranking. The weights are based on SCImago Journal Rank (SJR) values. We use the top two levels in their classification. The "A+" journals (weight 1.0) are assigned to Category 1, the "A" journals with (weight 0.208-0.859) to Category 2 of the FJL. forschungsmonitoring.org
- **Statistics:** A list compiled by the Australian Mathematical Society (AMS) is used here. The "A*" journals contained therein are listed as category 1, the "A" journals as Category 2 of the FJL. austms.org.au/Rankings/0104_AustMS_final_ranked.html
- **Finance:** The list compiled by the Amsterdam Business School (ABS) is used here. The "A*" journals included are listed as Category 1, the "A" journals as Category 2 of the FJL. abs.uva.nl/research/research-policy/research-policy.html

The journals in our Faculty Journal List are listed alphabetically within the respective category:

- ▶ **Category 1 Journals | 53**
- ▶ **Category 2 Journals | 66**
