Our Research Areas

The Faculty of Business, Economics and Statistics has developed five interdisciplinary research areas that overcome the limitations of disciplines and bring together ideas and projects from different fields.

CMI Changing Markets and Institutions

Transaction costs – costs caused by the exchange of goods and services in economic systems – are as important as costs caused by the production of those same goods and services. Efficient coordination of transactions in markets and companies through institutional design constantly offers new challenges for countries as well as for companies within an unwavering, further intensifying, global competition. The digitalisation of economic processes does not only change the scale (big data) but also the matter of economic transactions. Economic analyses and applications deal with the effectiveness of market imperfections and its control by governance structures and contractual incentive systems.

CSP Corporate Strategies and Processes

Modern companies put an end to the traditional separation of strategy development by market and environment analysis and organisation development regarding the design of internal processes. This is replaced by a strategic management

that, as a process, coordinates corporate structures and value-adding processes and takes into account the rapidly changing environmental conditions and internationality. Besides strategic management in particular, this research area also addresses technology and innovations management, supply chain and operations management as well as – caused by the advancement of digitalisation and the availability of big data – business analytics. Evidently, all other business disciplines as well as some economic disciplines (such as industrial organisation or labour economics) and interdisciplinary approaches (such as cooperative economics or sharing economy) are included in this research area as well.

DSA Data Science and Analytics

In times of the availability of big data of nearly all societal domains and an ever increasing complexity of this data (high dimensional data), the development of suitable statistical methods, algorithms and appropriate optimisation methods is more urgent and important than ever. The demand for academically trained experts in data science and analytics on national and international labour markets is high. This

results in challenges for the application field as well as for the latest methodological developments in statistics (analysis of high dimensional and heterogenic data, modelling, model selection and inference), operations research (optimisation and modelling) and quantitative and computer-assisted economics (business analytics, finance and applied econometrics). Applications are especially important for analysing currency, securities and energy markets, banks, insurances and their financial institutions, corporate finance of companies, as well as for logistics and operations management.

Human Behavior and the Economy

Human behaviour in economic decision-making is at the core of this research area. To be able to make predictions using business and economic models, it is necessary to make assumptions about human behaviour. In experimental economics, these assumptions and models are put to the test. This interplay between theoretical and experimental approaches allows for a more realistic model regarding human decision-making. The results of research conducted

on this topic today provide the foundation for its application in nearly all disciplines at our faculty, ranging from the analysis of economic and regulation policies and behavioural finance to solving business issues, e.g. in marketing, strategy, organisation, personnel and economic sociology.

Management of Resources

Resources – natural, human, financial and informational – are the foundation of economic activity. Their availability or shortage determines growth and development. Asymmetries in their distribution and privatisation caused by economic parties trigger strategic behaviour. Management of resources aims at the efficient use of resources in economic systems, on a societal as well as corporate level. Economic analyses and contributions focus on the growth and development of regions, sustainable environmental and energy policies and management, production and logistics within value-added chains, the design of educational and training systems as well as efficient information systems and their management.

Our Experts

On the following pages, we introduce our experts who conduct top-level research and teaching, contributing to the development of a centre of knowledge and expertise in the faculty's research areas. We group our experts into tenured academic staff (professors and associate professors), emeritus/retired colleagues who still conduct research and/or teaching at our faculty, and non-tenured academic staff (assistant professors, postdoctoral researchers, predoctoral researchers, other).

All experts are listed under the category they were associated with as of 31 December 2024. Researchers who left our faculty during the year 2024 are listed in the category they were last associated with.

Tenured Academic Staff

The following pages provide an overview of our academic staff with permanent contracts. The list is arranged alphabetically by last name and includes each individual's academic rank - either (full) Professor or Associate Professor - as well as their departmental affiliation.

Ania Martinez, Ana Begona | **Assoc. Professor**
Department of Economics

Auer-Zotlöterer, Katharina | **Assoc. Professor**
Department of Marketing and International Business

Borrmann, Jörg | **Assoc. Professor**
Department of Finance

Cuchiero, Christa (Vice Dean Teaching) | **Professor**
Department of Statistics and Operations Research

Cunat, Alejandro | **Professor**
Department of Economics

Dörner, Karl Franz (Dean) | **Professor**
Department of Business Decisions and Analytics

Ehmke, Jan Fabian | **Professor**
Department of Business Decisions and Analytics

Eisend, Martin | **Professor**
Department of Marketing and International Business

Fabel, Oliver | **Professor**
Department of Business Decisions and Analytics

Fadinger, Harald | **Professor**
Department of Economics

Fuchs, Christoph | **Professor**
Department of Marketing and International Business

Garcia, Daniel | **Assoc. Professor with Tenure**
Department of Economics

Gaunersdorfer, Andrea | **Assoc. Prof.**
Department of Finance

Gehrig-Merz, Monika | **Professor**
Department of Economics

Gehrig, Thomas | **Professor**
Department of Finance

Hautsch, Nikolaus (on leave) | **Professor**
Department of Statistics and Operations Research

Hohenwarter-Mayr, Daniela | **Professor**
Department of Business Law

Janssen, Maarten | **Professor**
Department of Economics

Jirak, Johannes Moritz | **Professor**
Department of Statistics and Operations Research

Keber, Christian | **Assoc. Prof.**
Department of Finance

Keck, Steffen | **Assoc. Professor with Tenure**
Department of Statistics and Operations Research

Kittel, Bernhard | **Professor**
Department of Economic Sociology

Klein, Irene | **Assoc. Prof.**
Department of Statistics and Operations Research

Kocher, Martin (on leave) | **Professor**
Department of Economics

Krivobokova, Tatyana | **Professor**
Department of Statistics and Operations Research

Leeb, Hannes | **Professor**
Department of Statistics and Operations Research

Lóránth, Gyöngyi | **Professor**
Department of Finance

Müller, Wieland | **Professor**
Department of Economics

Novák, Andreas | **Assoc. Prof.**
Department of Business Decisions and Analytics

Pfeiffer, Thomas | **Professor**
Department of Accounting, Innovation and Strategy

Pichler, Paul | Assoc. Professor with Tenure
Department of Economics

Plakoyiannaki, Emmanuella | Professor
Department of Marketing and International Business

Rauner, Marion | Assoc. Prof.
Department of Business Decisions and Analytics

Reisinger, Heribert | Assoc. Prof.
Department of Marketing and International Business

Reitzig, Markus Georg | Professor
Department of Accounting, Innovation and Strategy

Schachinger, Werner | Assoc. Prof.
Department of Statistics and Operations Research

Schaffhauser-Linzatti, Michaela | Assoc. Professor
Department of Accounting, Innovation and Strategy

Schlag, Karl | Professor
Department of Economics

Schmidt-Dengler, Philipp (Vice Dean Research) | Professor
Department of Economics

Sorger, Gerhard | Professor
Department of Economics

Steinberger, Lukas | Assoc. Professor with Tenure
Department of Statistics and Operations Research

Strobl, Günter | Professor
Department of Finance

Tang, Wenjie | Assoc. Professor with Tenure
Department of Accounting, Innovation and Strategy

Tyran, Jean-Robert | Professor
Department of Economics

Wagner, Stefan | Professor
Department of Accounting, Innovation and Strategy

Wandschneider, Kirsten | Assoc. Professor with Tenure
Department of Economics

Weilinger, Arthur | Professor
Department of Business Law

Windsperger, Josef (Visiting Professor of International Business) | Professor
Department of Business Decisions and Analytics

Zulehner, Christine | Professor
Department of Economics

Emeriti and Retired Professors

Emeriti and retired professors have the opportunity to continue their research at our faculty as Professorial or Senior Research Fellows, respectively. The designation reflects the respective professorship they held: Full university professors (emeriti) are referred to as Professorial Research Fellows after their retirement, associate professors (retired) are referred to as Senior Research Fellows.

Below, we list all emeriti and retired professors, who remained affiliated with the faculty during 2024. They continued to contribute either through teaching (marked with *) and/or by pursuing research in their role as Professorial or Senior Research Fellows.

Bomze, Immanuel *

Diamantopoulos, Adamantios | Professorial Research Fellow

Gutjahr, Walter * | Senior Research Fellow

Hartl, Richard * | Professorial Research Fellow

Pflug, Georg * | Professorial Research Fellow

Podczek, Konrad * | Senior Research Fellow

Pötscher, Benedikt * | Professorial Research Fellow

Strauß, Christine *

Vetschera, Rudolf * | Professorial Research Fellow

Wagner, Udo * | Professorial Research Fellow

Wirl, Franz | Professorial Research Fellow

Non-Tenured Academic Staff

Below, we list non-tenured academic staff, including those funded through regular University resources as well as externally funded personnel. The list is ordered alphabetically by last name and includes departmental or centre affiliation.

The **Post-Docs** section includes all faculty members with a postdoctoral contract in 2024. Some of them hold assistant professorships and are on a so-called tenure track. Upon successful completion of a qualification agreement, they may be appointed as tenured Associate Professors. Tenure-track positions are marked with *****.

The **Prae Docs** section includes all faculty members with a predoctoral contract in 2024.

The **Other** section includes academic staff not covered in the previous categories, who were affiliated with the faculty in 2024 and contributed to its research output e.g. through publications, editorial work, or by organising academic events.

Publications

This section presents the research output published by our faculty in 2024. The majority of our research is published in learned journals. We classify these journals into three broad categories, based on our Faculty Journal List (see Appendix). Our best publications can be assigned to "Category 1" and "Category 2". Those publications that cannot be assigned to either one of the two categories are summarized as "Other Journal Publications".

Category 1 comprises the very top 10% journals. Members of our faculty have published a total of 38 articles in such journals. Category 2 journals are among the top 25% of their fields or are named as very good in selected field-specific complementary lists. We count 41 publications in such journals.

Other journal articles and other publications such as monographs and contributions to collected volumes and

proceedings are also listed below. We do not list working papers.

Our **experts** (as listed in the previous chapter) are marked in blue. We report the underlying field(s) of research according to the research areas defined on page 3.

Research areas:

CMI = Changing Markets and Institutions
CSP = Corporate Strategies and Processes
DSA = Data Science and Analytics
HBE = Human Behaviour and the Economy
MR = Management of Resources

Theses Completed

Our PhD education offers training and supervision that allows students to acquire knowledge and skills necessary for a research-oriented career in the core fields of our faculty. The successful completion of the PhD programme marks the entry into the scientific community and it shows the ability to carry out independent research. We congratulate the 9 PhD students who completed their theses in 2024.

Doctoral / PhD theses

Name, First Name	Title	Supervisor
Alarcón Ortega, Emilio José	The management of time in Inventory Routing Problems	Dörner
Guo, Sainan	Dynamic Adjusting Method on Emergency Plans for Group Decision-making Based on Regret Theory	Vetschera
Heluo, Yuxi	Changing Job Designs: Occupational Requirements, Goal Setting, and Supervision	Fabel
Koval, Borys	Essays in Empirical Asset Pricing	Sögner
Kungl, Nora	Essays in Applied Microeconomics	Müller, Schmidt-Dengler
Mohammadhosseini Fadafan, Elmira	Automatic Adjustment via Smart Contracts in The Contractual Parties' Relationships	Vetschera
Peitler, Philipp	Ethical Concerns in Economics	Janssen, Schlag

Stelzeneder, Dominik	Effects of Information on Competitive Behavior and Decision Making	Kocher, Schlag

Habilitation theses

Name, First Name	Title
Heß, Simon	Essays in Applied Microeconometrics
Wimmer, Alexander	Unternehmensträger im Spannungsfeld zwischen wirtschaftlichen und ideellen Zielen

Editorial Work

Numerous members of our faculty – active as well as emeritus/retired – are engaged in editorial and publishing activities. In particular, many of our faculty members serve as editors, associate editors, or members of editorial boards of established journals. The list below shows who serves in which role for which journal. We do not list refereeing activities, as members of our faculty have, in total, most likely written several hundred of these, and many of them serve as referees for prestigious journals.

Category 1 Journals

Editor-in-Chief, Co-Editor

Econometric Theory:
Pötscher, Benedikt (since 1995)

Associate Editor

Journal of Business and Economic Statistics:
Hautsch, Nikolaus (since 2015)

Journal of Computational and Graphical Statistics:

Externally Funded Research Projects

In this chapter, we present our extensive research projects. The Faculty of Business, Economics and Statistics and its members engage in various research fields with multiple funding sources. The three largest sponsors worth mentioning are the Austrian Science Foundation (FWF), the Austrian National Bank (OeNB), and the Christian Doppler Research Association (CDG). Funding as well as cooperation with other institutions and partners play an essential part in our faculty's aim to research a broad range of scientific issues.

The table shows the annual income from both ongoing and completed third-party funded projects.

Sources of External Funding (in thousand €)

	2020	2021	2022	2023	2024
FWF	1,343.7	1,578.8	1,198.9	683.9	1,334.3
OeNB	117.9	431.8	629.6	379.0	534.1
EU	21.0	18.7	3.1	159.0	220.1
FFG	25.8	10.0	221.7	75.4	161.2
WWTF	533.0	6.3	-	-	140.4
ÖAW	9.5	47.5	67.4	25.5	-
CDG	63.6	84.0	83.6	85.7	12.2
Other	211.0	25.4	170.9	81.5	166.2
Total	1,845.3	2,202.4	2,375.2	1,490.0	2,568.5

Externally Funded Individual Projects

Pricing in imperfectly competitive markets (Research Groups)

Contact person(s): Daniel Garcia, Maarten Janssen, Eeva Mauring, Philipp Schmidt-Dengler, Christine Zulehner (Research Group)
 Research area(s): Changing Market and Institutions (CMI)
 Funding body: FWF (Austrian Science Fund)
 Funding: 1,362,667.00 €
 2021 - 2026

Economists have formally studied pricing in imperfectly competitive markets since the mid nineteenth century. By analyzing the potential inefficiencies of such markets this research has guided regulatory and competition policy. With more and more transactions being shifted to online markets, research in this area remains highly relevant. The behavior of firms in imperfectly competitive markets is also studied in the management literature, with a stronger focus on strategies available to firms to become more profitable. Applications include bookings for hotel rooms, pricing of online airline tickets, as well as pricing in vertical contracts between firms.

This project brings together the economics and management literatures and studies pricing in imperfectly competitive markets both from an empirical and a theoretical perspective. Our analytical framework uses game-theoretic models to capture strategic behavior in imperfectly competitive markets. To carry out the empirical analysis, we resort to econometric methods. In doing so, we bring new tools to the study of classical questions. We also aim to tackle new issues related to online markets and algorithmic pricing. By interacting with competition authorities, the project also aims to deliver insights that are relevant for competition policy.

Universal Structures in Mathematical Finance

Contact person(s): Christa Cuchiero
 Research area(s): Changing Market and Institutions (CMI)
 Funding body: FWF (Austrian Science Fund)
 Funding: 1,200,000.00 €
 2020 - 2026

Universal structures in the sense of the current proposal pertain literally to both, finance and mathematics. On the financial side we mean robust empirical features that hold universally across different markets, asset classes and in particular over time. On the mathematical side it concerns universally appearing model classes and probabilistic properties, inherent in many at first sight unrelated phenomena. It is the purpose of this proposal to explore this mathematical and financial universality and to provide a unifying stochastic framework whose foundations have already been laid by the principal investigator and her co-authors in several works. In financial respect, the guiding universal structures are the stability of the capital distribution curves, as investigated in stochastic portfolio theory, and the rough volatility paradigm. Mathematically, it is on the one hand a generic non-Markovianity of at first sight naturally low dimensional objects, be it market capitalization

or volatility. On the other hand mathematical universality appears in form of infinite dimensional affine or polynomial processes as well as McKean Vlasov equations. It allows to treat universal phenomena from finance with universal stochastic methods. It is the first time that two major fields of mathematical finance, namely stochastic portfolio theory and contemporary stochastic volatility modeling, including multivariate rough and local stochastic volatility models, are considered from a common perspective. We believe that other areas in Mathematical Finance, for instance systemic risk, can be investigated in this new light. Beyond that we expect that the proposed work will lead to new insights in the theory of non-linear PDEs, McKean Vlasov equations, SPDEs and infinite dimensional stochastic analysis.

Josef Ressel Centre for Adaptive Optimisation in Dynamic Environments (JRC AdaptOp)

Contact person(s): Karl Franz Dörner
 Research Theme: Data Science and Analytics (DSA),
 Management of Resources (MR),
 Funding body: CDG (Christian Doppler
 Forschungsgesellschaft)
 Funding: 331,904.00 €
 Duration: 2019 - 2024

The Josef Ressel Centre for Adaptive Optimisation in Dynamic Environments (JRC AdaptOp) identifies new applications in dynamic real-world environments and aims at the development of planning approaches that can cope with continuously changing conditions. Dynamic optimisation problems (DOPs) in domains such as warehousing, production, and transportation are primarily addressed in this context. The workloads of gantry cranes, heavy-duty vehicles, and glass production lines are subject to optimisation. New DOPs within these domains will be formulated and new benchmarks will be created. The goal is to build a framework for open-ended adaptive methods, facilitating the detection of changes in the environment and the reaction to them. The integration of machine learning techniques to predict the occurrence of future events, devise potential future scenarios, and select and configure promising algorithms is also a major research focus. Finally, the methods' performances will be studied and compared within controlled simulation experiments and evaluated within real-world test environments at the JRC's industrial partners Industrie-Logistik-Linz GmbH (ILL), LiSEC Austria GmbH (LiSEC), Logistik Service GmbH (LogServ), and voestalpine Stahl GmbH (voestalpine).

The University of Vienna, as an external module of the JRC, studies the transportation and intermediate storage of semi-finished casting products, so-called steel slabs, inside a steel-producing plant. Within the scope of intra logistical optimisation efforts, the research emphasis is threefold. First, solve a pickup and delivery problem that addresses the transportation of steel slabs as they pass multiple production stages, all of which are carried out at different locations inside the plant. Second, address the storage of work-in-process materials during the time they are buffered in large (outdoor) storage yards, waiting to be fed into the next stage

of the production process. As the storage yards are organised in rows and function as two-dimensional stacking areas, consisting of stacks built up by steel slabs being located on top of each other, it is of utmost importance to ensure that the stacks remain organised while being manipulated during steel slab pickups or deliveries. Third, increase productivity by pre-marshalling slab yard stacks. This refers to the re-organisation of stacks such that varietal purity of stacks is maintained by making sure that slabs of a certain order or type are stored closely together in a desired sequence.

Understanding Social Mobility – An Experimental Approach

Contact person(s): Jean-Robert Tyran
 Research area(s): Changing Markets and Institutions (CMI), Human Behaviour and the Economy (HBE)
 Funding body: Jubiläumsfonds der österreichischen Nationalbank (OeNB)
 Funding: 246,000.00 €
 2021 - 2025

This project experimentally investigates the relevance of the following structural determinants of social mobility: the degree to which success is driven by luck rather than effort, discrimination, wage compression, and the degree of social stratification. We explore how different policy interventions such as income or inheritance taxes affect social mobility under varying structural conditions. We also investigate people's acceptance of alternative policy measures by the means of voting. We generate benchmark predictions that we put to a test in the economic laboratory.

EMIL: Exchange Mechanisms in Logistics

Contact person(s): Rudolf Vetschera
 Research area(s): Changing Markets and Institutions (CMI), management of Resources (MR)
 Funding body: FWF (Austrian Science Fund)
 Funding: 237,220.20 €
 2021 - 2024

The concept of shared transportation resources, also denoted as collaborative vehicle routing, is one of the hot topics in transportation and logistics. This can be explained by the growth of the e-commerce sector, which boosts competition and brings down prices. A collaboration can be described as a partnership between two or more companies to optimize operations by making joint decisions and sharing information, resources, or profits. In this project, we are focusing on horizontal collaborations, in which companies at the same level of a supply chain are sharing resources through the exchange of selected requests with their competitors. The main aim of this project is to increase the overall efficiency of the transport industry, in particular by avoiding costly and pollutive empty trips. This will be achieved by improving both the planning processes of individual carriers, and the collaborative reallocation of transport requests to carriers, who are willing to enter collaborations with decentralized planning. In particular, we want to develop mechanisms for the reallocation of requests between carriers to obtain a fair and efficient allocation of such requests. The core of the project is in transportation research, and it makes heavy use of concepts and methods from operations research, game theory, and market design.

Rechtsrahmen für Central Bank Digital Currencies in Österreich

Contact person(s): Martin Miernicki
 Research area(s): Changing Markets and Institutions (CMI)
 Funding body: Jubiläumsfonds der österreichischen Nationalbank (OeNB)
 Funding: 216,000.00 €
 2021 - 2024

The research project deals with the legal framework for the potential emission of Central Bank Digital Currency by the OeNB or the ECB and highlights the need for reforms de lege ferenda. For this purpose, the research explores which types of CBDC the OeNB could introduce on its own or with the authorization of the ECB as well as the steps necessary for the recognition as legal tender; liability risks for the OeNB and responsibilities with regard to personal data are discussed. Moreover, the project sheds light on the status of CBDC under Austrian private law (property, contractual relations) which includes an analysis of the relevant provision on the laws on consumer protection, rental contracts and employment relations. Furthermore, the status of CBDC under the supervision laws on AML/CTF, banking, payment services and securities as well as tax laws (income tax, VAT) is analyzed. Smart Contract applications (so-called programmable CBDC) are part of the research project.

Econometrics of Systemic Risk: Inference, Model Comparison and Network Dependencies

Contact person(s): Nikolaus Hautsch, Jérémy Leymarie
 Research area(s): Data Science and Analytics (DSA)
 Funding body: Jubiläumsfonds der österreichischen Nationalbank, Österreichische Nationalbank (OeNB)
 Funding: 201,000.00 €
 2021 - 2025

Monitoring the systemic riskiness of financial companies is a central requirement for macroprudential regulation and assuring financial market stability. Point estimates of systemic risk, however, are of limited use without reliable statistical inference. The latter is urgently required to be able to assess the significance of differences between systemic risk estimates of individual banks or differences in systemic risk rankings. Likewise, rigorous procedures to backtest and to perform comparisons between systemic risk forecasts are essential to operationalize systemic risk measures in financial regulation. Similarly, econometric frameworks for capturing causal dynamic and simultaneous dependencies in possibly high-dimensional bank networks are important to identify major channels of how tail risk is spread through the system. The project is decomposed into three main tasks. The first task is to develop statistical inference for popular systemic risk measures, like MES, SES, SRISK or Delta CoVaR. We will derive corresponding asymptotic distributions semi-parametric-based inference in order to equip these measures with confidence intervals. This will allow us to make statements of the statistical reliability of systemic risk estimates. The second task is to propose a statistical framework for comparing systemic risk models. We will propose a class of loss functions which enables us to jointly elicit MES and VaR. This allows us to rank MES estimates arising from alternative econometrics models and to

pursue rigorous backtesting of competing forecasts. The third task will bring together network-based systemic risk measures with multivariate dynamic models for quantiles. We will propose a unifying approach to model causal as well as simultaneous dependencies in possibly high-dimensional financial networks.

Classification – Preprocessed and high-dimensional data sets

Contact person(s): Lukas Steinberger
Research area(s): Data Science and Analytics (DSA)
Funding body: FWF (Austrian Science Fund)
Funding: 167,076.00 €
2021 - 2025

In this project we study classification based on two types of preprocessing designed for imbalanced and confidential data sets. We also investigate consequences of high-dimensional features. Imbalanced data sets are known to significantly reduce the performance of classifiers in statistical learning which tend to be biased towards the majority class.

The second part of the project is concerned with classification based on training data satisfying a local differential privacy constraint. Differential privacy is an increasingly popular way to protect data owner's privacy while enabling the extraction of valuable information about the population. Finally, we will investigate the performance of classification methods when feature vectors are highdimensional and also explicitly include the numerical approximations used to practically implement those classifiers into the analysis. We will study the bias-towards-the-majority-class effect and will develop statistically efficient data reduction preprocessing within the majority class. We shall design new nonparametric classification algorithms which minimize this bias while not losing power with respect to the misclassification error. Secondly, we shall quantify the necessary loss of prediction performance due to the local differential privatization and design optimal privacy mechanisms and corresponding classification algorithms.

In the third part, we will study the misclassification error of classifiers trained using numerical approximation schemes like SGD, in a high-dimensional framework. The problem of imbalanced data will mainly be approached by subsampling methods and penalized risk minimization based on novel, modified penalty terms. For private data analysis, we adopt a minimax perspective and adapt existing private minimax lower bounds to the classification context. Finally, for the analysis of stochastic algorithms in high-dimensional problems we will rely on random matrix theory and a Marchenko-Pastur type asymptotic framework.

Next to no theoretical analyses of classification problems with imbalanced data exist. The same holds true for minimax optimal classification under differential privacy. Finally, numerical algorithms to train classifiers are usually analyzed only for fixed feature dimension and as sample size increases. Thus, the results and methods we develop will be novel and highly relevant additions to the modern data analysts tool kit to deal with complex and high-dimensional data.

Supersmooth functional data analysis and PCA-Preprocessing

Contact person(s): Moritz Jirak
Research area(s): Data Science and Analytics (DSA)
Funding body: FWF (Austrian Science Fund)
Funding: 167,076.00 €
2021 - 2025

In this project, we study nonparametric regression and classification for functional data when the underlying regression functions and functional densities, respectively, are supersmooth. Based on a PCA-preprocessing technique, we anticipate polynomial convergence rates of the statistical procedures, which is in strong contrast to the usual asymptotics in nonparametric functional data analysis, where typically only logarithmic rates are available. For a thorough understanding of this phenomena, we aim to uncover the information theoretic complexity of this statistical problem and its interplay with the geometry of the underlying spaces. The second key objective is an early stopping procedure, intrinsically requiring our algorithm to learn an optimal selection of appropriate subspaces based on principal component approximations. In this context, we are particularly interested in computationally effective (sequential) procedures, also being robust with respect to heavy tails or dependencies. Moreover, the corresponding functional regression and classification problems shall be considered when no direct access to the data is available due to privacy constraints.

Digitale Zentralbankwährung: Design, Verwendung und makroökonomische Implikationen

Contact person(s): Paul Pichler
Research area(s): Changing Markets and Institutions (CMI)
Funding body: Jubiläumsfonds der österreichischen Nationalbank (OeNB)
Funding: 249,000.00 €
2022 - 2025

The proposed project seeks to facilitate improve the scientific assessment of the desirability of a Central Bank Digital Currency (CBDC) by developing a formal framework to better quantify its potential benefits and costs. It will focus on the systematic comparison of different potential designs of CBDC and the intensive versus extensive margin of adoption, i.e., who is likely to adopt CBDC and for what transactions will CBDC likely be used. The first part of the project will develop a payment instrument choice model of CBDC, the second part will incorporate CBDC into a macroeconomic model and study the effects of its introduction on financial and macroeconomic aggregates such as credit creation and output.

Work 4.0 Care - Wirkungen von Technisierungs- und Digitalisierungsmaßnahmen auf Pflege- und Betreuungskräfte

Contact person(s): Michaela Schaffhauser-Linzatti
Research area(s): Human Behavior and the Economy (HBE)
Funding body: gesetzl. Interessensvertretung
Funding: 24,026.45 €
2023 - 2025

Common Ownership and Systemic Risk in the Banking Sector

Contact person(s): Thomas Gehrig
 Research area(s): Changing Markets and Institutions (CMI)
 Funding body: Jubiläumsfonds der österreichischen Nationalbank (OeNB)
 Funding: 190,000.00 €
 2022 - 2026

The project documents the rise in common ownership in European banks by global investment funds since the Great Financial Crisis in 2007/8. This rise in common ownership is primarily concentrated in globally systemically important banks that are the main drivers of systemic risk exposure. Moreover, we identify significant differences in the ownership patterns of funds with a seemingly long-term orientation and funds with shorter investment horizons. The analytical part of the project aims to identify the underlying drivers of common ownership and assess the question of whether, ultimately, supervisors should be concerned about potentially destabilizing consequences and systemic risk caused by increasing common ownership.

AI-based planning for greener train operations

Contact person(s): Jan Fabian Ehmke
 Research area(s): Data Science and Analytics (DSA), Management of Resources (MR)
 Funding body: FFG (Austrian Research Promotion Agency)
 Funding: 242,261.00 €
 2022 - 2025

In this project, the focus is on the planning of green railway operations. To this end, we will develop and investigate new techniques for resource planning considering environmental objectives such as minimizing energy consumption. These techniques will be AI-based and include simheuristics that learn to solve resource planning problems by combining simulation and optimization. We want to overcome the significant challenge of modelling energy consumption in a way that simheuristics can create green schedules for trains and drivers. This requires the analysis and aggregation of real-world energy consumption data provided by ÖBB, modeling of resource planning, as well as defining AI-based interaction between simulation and heuristic optimization.

Pro-aktive Tourenplanung für Kurzfrist-Testung in Pandemien

Contact person(s): Jan Fabian Ehmke
 Research area(s): Data Science and Analytics (DSA), Management of Resources (MR)
 Funding body: FWF (Austrian Science Fund)
 Funding: 387,182.25 €
 2022 - 2024

In the COVID-19 pandemic, we saw that rapid and efficient testing can effectively slow the spread of a virus. However, especially at the beginning of the pandemic, testing was extraordinarily time-consuming and expensive, and testing resources were not available everywhere on the scale required. Authorities responded to this challenge with innovative ideas: in Vienna, for example, a bicycle-

based team of mobile testers was created, which could be requested in case of suspicion. The mobile tester fleet could then collect samples from suspected cases, bring them for evaluation, and thus help reduce further spread. Based on the idea of a mobile fleet of testers, we now want to investigate in this research project how scarce resources can be used sensibly in a dynamic environment by planning ahead. For this purpose, modern methods and tools from agent-based simulation, data analysis and dynamic vehicle routing are used. For the COVID-19 example, this means, for example, not waiting for potential suspicious cases, but using simulation to predict how a pandemic will spread, so that suitable tests can then be carried out in advance. This first requires a forecast by means of a spread model, which is already available for the COVID-19 example due to the extensive data situation. But at which point should one test already in advance? The underlying problem must be mathematically formulated and analyzed for this purpose. In addition to agent-based simulation, innovative learning methods are also used to ensure that the test resources are used as effectively as possible. This then results in a catalog of policies that are examined in the simulation for their effectiveness. For what kind of problems is such an approach useful at all? Which policies of predictive planning work particularly well? Abstracting from the COVID-19 example, we also want to analyze similar problems. When is the interaction of predictive planning in combination with machine learning helpful? How can detailed simulations improve forecasts? And how does one computationally feasibly integrate information from highly complex simulations into predictive planning? Examples here extend far beyond COVID-19, e.g., to demand forecasting for delivery services. Participants in the project are Univ.-Prof. Jan Fabian Ehmke from the University of Vienna, who will focus on demand modeling. In addition, there is the expertise of Univ.-Prof. Dr. Marlin Ulmer, University of Magdeburg, who will be responsible for learning procedures related to predictive vehicle routing. Evaluation and demand generation will be done by Dr. Niki Popper (TU Wien), who is an expert in the area of agent-based simulation.

VIPES - Verlässliche und integrierte Planung von Umläufen und Schichten in Eisenbahnsystemen

Contact person(s): Jan Fabian Ehmke
 Research area(s): Data Science and Analytics (DSA), Management of Resources (MR)
 Funding body: FFG (Austrian Research Promotion Agency)
 Funding: 291,782.00 €
 2022 - 2025

The planning of resources in railway systems is a challenge due to the large number, complexity and interactions between infrastructure, traction units and personnel. The aim of planning is to ensure efficient and reliable railway operations. Due to the complexity of the overall railway system, resource planning for traction units and personnel is usually sequential. The primary objective is to minimise costs, assuming that no delays or cancellations occur. However, especially with tight rotation and shift schedules, any disruptions that occur jeopardise disruptions jeopardise the reliability and, as a result, the efficiency of the entire railway system. The aim of this

project is to optimise both the train schedules for traction units and the shift train crews in such a way that they are efficient and reliable. In order to optimise the quality of the plans determined using mathematical optimisation models and sophisticated solution methods in a realistic environment, they are evaluated in detail by an agent-based simulation. The great advantage of agent-based simulation is the possibility of analysing all relevant details and evaluating their reliability. Optimisation models, on the other hand, must abstract from the details of the overall railway system in order to find satisfactory solutions within acceptable runtimes. In order to achieve the goal of efficient and reliable plans at the same time, it is important to achieve intelligent interaction between optimisation and simulation. The simulation results in complex performance indicators that require an exchange of information between mathematical optimisation models, solution methods and agent-based simulation and thus significantly increase the quality of information in planning. To this end, existing approaches such as mathematical optimisation models and associated solution methods in order to incorporate information on delays and other disruptions into the planning process. Previous approaches only have a rudimentary exchange of information, which is limited to a small amount of predefined information and which is usually not automated. Within the framework of VIPES, we are explicitly focussing on the effective exchange of information between optimisation-based planning and simulation-based evaluation. An AI-based component identifies and analyses structures of efficient and reliable solutions and uses these findings to optimise the mathematical optimisation and the evaluation of results in a targeted manner with the necessary information in a targeted and smart way. Finally, the planning of traction units and personnel, which was previously separate, is integrated into a comprehensive simheuristic. The digital technologies developed will help to improve the efficiency and reliability and reliability of the transport services operated by ÖBB. A contribution will also be made by will also be the creation of rotation and shift schedules that are easier to explain in practice and therefore more likely to be accepted by operators and staff. The consortium is led by DWH GmbH and also consists of ÖBB Produktion GmbH, the University of Vienna (UW) and the Technical University of Dresden (TUD). DWH GmbH is responsible for agent-based simulation, analysing fault data and project management. ÖBB provides the necessary infrastructure and delay data and is available for discussions on the relevant planning problems. The TUD will further develop mathematical models for the circulation and shift and shift planning as well as suitable solutions. The UW will model disruptions using reliability models and design an AI-based control system that provides a smart interface between mathematical optimisation and agent-based simulation.

2022 - 2026

Why do consumers not always switch to a cheaper alternative of a product or a contract? A common finding is that consumers invest too little into searching for the best available deal or switching to the best available option. This is problematic since consumer search and switching are crucial for generating competition between firms. The problem is well-documented in the economic literature, but there is currently little consensus about what psychological mechanisms cause consumer inertia, and what can be done about them. This project aims to develop better understanding for the observed widespread reluctance of consumers to search and switch to better deals. The project builds on a theoretical model that combines possibly behavioral consumers with profit-maximizing firms to ask what features of the market and regulation thereof foster consumer inertia. Once fully developed, this model as well as other potential explanations for consumer inertia will be investigated empirically. The latter will be done using a variety of data sets and methods. The project will design and conduct experiments that allow to disentangle different behavioral causes for consumer inertia such as inattention, procrastination, biased beliefs, and loss aversion. Moreover, versions of the experiment, which can be conducted with both convenience and representative subject pools, will be used to validate survey questions that capture the behavioral traits that lead to consumer inertia. In addition, the project will use a repeated representative consumer survey that combines information on consumers purchasing decisions, their socioeconomic characteristics, and their behavioral traits (such as attitudes towards risk and loss aversion or tendency for inattention and procrastination) in order to study what drives contract-switching behavior and to elicit beliefs about the expected surplus from switching. The novel panel study will, in addition, include randomly assigned treatments regarding, for example, switching reminders that are not only interesting from a policy perspective but help to distinguish the different traits.

How do mergers influence prices and quantities in differentiated product markets? How does advertising change purchasing decisions of consumers? Which products are perceived as good substitutes? Without a realistic model of consumer decision making in differentiated goods markets, these questions cannot be answered in an empirically robust way. Given the flood of products in today's markets, it does not seem plausible that consumers consider all available products. The subset of products that are actually considered is referred to in the literature as

the "consideration set." This project focuses on developing novel empirical techniques for identifying these subsets or "consideration sets." Example product categories where consumers have limited-information include beer, cars, or coffee, where many variants are offered. Despite large choices, previous research has shown that consumers only consider between 4 (coffee) and 8 (cars) different products. More recent empirical evidence also shows that consumers do not always make fully informed purchase decisions and choose from a reduced number of alternatives. The alternatives considered then do not include the entire product choice. However, most of the existing economics literature on differentiated products demand assumes that consumers are aware of and consider all products available in a market. If this assumption is violated, the result is a bias in demand estimates, which in turn leads to misleading economic policy conclusions. Despite its importance there is, however, a lack of empirical knowledge about how consumers shape their consideration process and which products they are more likely to include in their consideration set. Our goal is to estimate the extent to which different consumers consider the available products. To obtain credible estimates of consideration sets, our modeling approach will allow consumers to differ in the extent to which they consider sets. We apply our modeling approach to a large number of categories from the U.S. consumer goods industry, and investigate the differences between model predictions based on the assumption of fully informed purchase decisions and the alternative assumption of limited informed purchase decisions. To this end, we analyze scenarios in which prices change due to events like firm mergers or cost shocks.

COME - Cooperative Meetings

Contact person(s): Michaela Schaffhauser-Linzatti
 Research area(s): Human Behavior and the Economy (HBE)
 Funding body: gesetzl. Interessensvertretung
 Funding: 63,966.15 €
 2023 - 2024

Many employees complain about bad meetings, but very few change them for the better - they are not aware of how much the quality of meetings determines participation in organizations and companies. The COME project aims to empower employees to know, demand and shape their part in shaping digital meetings. For the first time in the German-speaking world, the biggest problems in digital meetings are identified in a representative study and feasible solutions for the most important issues are identified in short learning videos. Through cooperation with works councils and trade unions, these learning nuggets will be made available to a broad public free of charge. This project is a low-threshold sensitization for the concrete shaping of digital change in the professional context with a very high impact.

Maschinelles Lernen in BPC für Tourenplanungsprobleme

 2023 - 2025

The planning and execution of deliveries represents a significant share of the costs in the area of distribution logistics and there is a great interest in exploiting the optimization potential in this area as best as possible. Therefore, route planning problems are also one of the central issues of Operations Research (OR). The use of optimization methods for route planning promises great potential for cost savings through the higher quality of the planning results as well as through the automation and acceleration of the planning process. There are numerous variants of route planning problems based on the different real-world requirements that transport service providers face. In most route planning problems, the task is finding the cheapest set of routes for a given fleet of vehicles such that a given set of orders is fulfilled while taking various side-constraints into account. The most powerful exact route planning algorithms are based on branch-cut-and-price (BCP), which in turn is based on column generation techniques. Here, a master problem is responsible for the best selection of the available routes, while one or more so-called pricing problems successively generate new routes. The planned project is intended to generate new insights into the use of machine learning (ML) in BCP to solve route planning problems. The key question is how ML can be used in OR algorithms, because optimization problems are very different from most problems successfully solved by ML.

Due to pandemic-related measures, researchers have been forced to interact with current and potential future collaborators almost exclusively via virtual communication tools. We plan to investigate how this lack of direct face-to-face interactions might change the way researchers collaborate on joint projects and how this might then change the quality of the resulting research. In particular, we will compare how these effects might differ between demographic groups, focussing especially on female researchers, early career researchers and researchers with international backgrounds.

Heterogeneous risk preferences, entrepreneurship, and wealth inequality

Contact person(s): Monika Gehrig-Merz
 Research area(s): Human Behavior and the Economy (HBE)
 Funding body: Jubiläumsfonds der österreichischen Nationalbank (OeNB)
 Funding: 163,000.00 €
 2023 - 2026

We study the role of heterogeneous risk preferences as determinants of entrepreneurial decisions and their implications for wealth inequality. We ask how individuals' risk attitude affects their choice of becoming a risk-bearing entrepreneur as opposed to a wage worker with a stable income, and how this affects wealth accumulation via savings/investment and hiring decisions. We combine survey evidence on subjective risk attitudes with individual responses to hypothetical lottery questions and infer individual measures of risk aversion. Empirically, we investigate the importance of risk attitudes for individuals to transition to self-employment. We use these empirical insights in a quantitative life-cycle model.

Anti-migration sentiments: Parochial vs. conditional altruism

Contact person(s): Christian Koch
 Research area(s): Human Behavior and the Economy (HBE)
 Funding body: Diligentia Stiftung
 Funding: 21,000.00 €
 2023 - 2025

Large-scale immigration frequently provokes a backlash among native populations. Conventional wisdom attributes this reaction to a near-universal distaste for sharing resources across ethnic lines. Recent studies, however, challenge this claim. It appears that what is often interpreted as parochial altruism may actually be a form of conditional altruism, where group boundaries serve as a means to determine who is likely to cooperate. The activation of these latent group boundaries may also be facilitated by competition for scarce resources. This research project seeks to investigate the extent to which cultural concerns are mediated by economic conditions and associated fairness perceptions. To accomplish this, we propose to conduct a tailored online experiment involving Germans and Turks, where we can manipulate whether economic and cultural concerns align or not.

Environmental policy under political pressure

Contact person(s): Gerhard Sorger
 Research area(s): Changing Markets and Institutions (CMI)
 Funding body: Jubiläumsfonds der österreichischen Nationalbank (OeNB)
 Funding: 87,000.00 €
 2023 - 2025

Climate change poses major challenges for governments around the world. A particularly important aspect of the transition from traditional economy to a carbon neutral one is that it necessarily creates economic winners and losers. Individual companies or entire industries that are dependent on the use of fossil fuels lose part of their business basis, while other industries benefit immensely from the transition. This situation creates a favorable breeding ground for lobbying and other forms of political influence. The proposed project aims at contributing to the understanding of this problem by modeling climate policy as a dynamic hierarchical game between political interest groups on the one side and the government on the other.

Steuerung der Online-Suche mit Big Data

 2023 - 2027

The internet has completely reshaped consumer markets. One important issue is that much more so than in traditional brick-and-mortar markets there is a crucial role for online search platforms, such as Google, Tripadvisor or Booking.com, to bring together supply and demand. Consumers search for certain keywords and using large datasets on consumer search activities these platforms present a ranking of firms that may be key-word relevant thereby steering consumers to search firms in a certain order, affecting their eventual purchases. Search platforms (as gateways to online markets) may rank the products in the order they think would best fit the consumer preferences, but they may also obfuscate the ranking. Many of these search platforms also have so-called "sponsored positions" at the top of their ranking where firms compete and pay to be included. Casual evidence suggests that using search data to steer consumer search is highly profitable. To evaluate the welfare consequences of the behaviour of search platforms, the effects of steering search should be modelled explicitly. In this project, I aim to evaluate the different incentives of platforms to use their big data to steer consumer search, the incentives of firms to bid to get into sponsored positions, and how this shapes the competitiveness of markets and consumer well-being.

AIROW - Artificial Intelligence in Rowing

Contact person(s): Nikolaus Hautsch
 Research area(s): Data Science and Analytics (DSA)
 Funding body: Federal Funding
 Funding: 973,394.00 €
 2022-2025

This project will bring together methodological competence in statistics, machine learning and computer science with current developments in sport sciences as well as technological progress in wearables and medical diagnostics in order to optimize training load of top athletes in endurance sports. We will collect and process „big data“ from training and performance processes of individual athletes and will use state-of-the-art machine learning technology in order to measure effective training load, to predict the effect of training impulses and to optimize training management. It will be carried out as a pilot project in cooperation with the Austrian Rowing Federation and will be tailored to the specific needs and conditions in rowing. In a later stage, the insights gained from the project will be transferred to disciplines with similar training contents and requirements, such as swimming, triathlon, cycling, cross-country skiing and long/mid-distance running. The project will bring together researchers from statistics, computer science, mathematics, sports science and sports medicine. While being practically highly relevant in order to strengthen the competitiveness of Austrian top-level sports, the project will be scientifically challenging and will produce novel insights and findings. The project is funded by the Bundesministeriums für Kunst, Kultur, öffentlichen Dienst und Sport and will be carried out by the Research Network Data Science and the Institute of Sports Science of the University of Vienna in collaboration with the Austrian Rowing Federation.

Alte Konsument:innen, neue Herausforderungen: Die Darstellung älterer Menschen in der Werbung und deren Persuasionseffekte

Contact person(s): Martin Eisend
 Research area(s): Management and Marketing
 Funding body: DFG (German Research Foundation)
 Funding: 295,545.00 €
 2024-2027

Older consumers are an increasing group in society, with a rapidly growing spending power (particularly in developed countries). Today, so-called "elder professionals" (45-64 years) along with seniors (>64 years) constitute a wealthy group. They can afford more than their younger counterparts; they are increasingly at ease with technological innovations (e.g., most Twitter and Facebook accounts belong to 40-year-olds) and they even adopt some innovations earlier than younger consumers (e.g., e-bikes). Despite the growing importance of older people as consumers, advertising mostly uses young (i.e., between 20-30 years of age) endorsers, and it neglects older ones. Furthermore, there is no research on how older consumers are currently represented and portrayed in advertising, and how any differences in representations and portrayals can be explained. There is no systematic review on persuasive effects of older people portrayals in advertising. Existing empirical evidence is scarce, inconclusive and neglects important social effects, such as age stereotyping (inaccurate beliefs and mental representations about a

given age group) and ageism (discrimination of a person based on their age). Our goal is to address the following research problems: how often and in what way older people are portrayed in advertising; what are the persuasive effects of older people portrayals in advertising, and how these effects can be explained. To examine these research problems, we will conduct several empirical studies. Our work will contribute to the field of advertising and consumer behavior in the following ways: 1) A content analysis will add new empirical data about the current representation and portrayals of older people in advertising in various media outlets; it will help explain variations in the representation of older people in advertising across time and countries. 2) A meta-analysis will provide an empirical generalization of prior (mixed) findings. Empirical generalizations are considered to be one of the basic forms of marketing knowledge and cornerstones for advancement of empirically grounded theories. They also shield us from random or underpowered empirical findings, questionable results, claims or conclusions. 3) A meta-analysis and experiments will help explain variations in the effects of older people in advertising and find boundary conditions to the effects of older people portrayals in advertising. In sum, our work will contribute to the development of such scientific disciplines as advertising and consumer behavior by providing new and generalizable knowledge about representation, portrayal, and effects of older people in advertising; by providing new explanations for the representation, portrayals, and effects of older people in advertising; by resolving inconsistencies in existing findings via testing new moderators and mediators.

Cross-country evidence on information evaluation competency

Contact person(s): Christian Koch
 Research area(s): Human Behavior and the Economy (HBE)
 Funding body: FWF (Austrian Science Fund)
 Funding: 261,992.00 €
 2024-2026

In an increasingly digitalized world, consumers and citizens need to be able to evaluate information critically. This is especially important as much of the information they encounter may be strategically distorted. Companies often have incentives not to fully inform consumers or mislead them to promote their interests. This happens, for example, through advertising on social media, where the information presented is often influenced by paying parties. Such distorted information can also resonate in so-called "filter bubbles" and "echo chambers," where consumers only see information that confirms their existing beliefs. Our research project examines how people from different countries cope with this challenge. We are conducting an online study with representative samples from Austria/Germany, the USA, and China. In doing so, we measure participants' ability to critically evaluate information and analyze which factors influence their "skepticism." We are particularly interested in how different regulatory environments and individual factors such as education and work experience affect this ability. Additionally, we are investigating whether simple educational measures, such as short explanatory videos, can improve the ability to critically evaluate information. In these videos, we explain the basic mechanisms of information distortion and provide practical tips on how to better assess information. Through a follow-up study with

our Austrian-German sample, we examine whether and how these videos improve participants' information evaluation skills in the long term. Our goal is to identify ways to better protect consumers and citizens from misinformation. We hope that our research will help raise awareness of the importance of critical information evaluation and develop practical solutions to improve this crucial skill.

Steuerung der Online-Suche mit Big Data

Contact person(s): Maarten Janssen
Research area(s): Human Behavior and the Economy (HBE)
Funding body: FWF (Austrian Science Fund)
Funding: 372.430.00 €
2024-2028

Buying and selling products on the internet is affecting the lives of many people. This project studies the impact of digital search platforms, such as Google, Tripadvisor or Booking.com, to bring together supply and demand. Consumers search for certain keywords and these platforms present a ranking of firms that may be keyword relevant thereby steering consumers to search firms in a certain order, affecting their eventual purchases. Search platforms may use large datasets on consumer search activities and their purchases to produce personalizing rankings. Search platforms (as gateways to online markets) may rank the products in the order they think would best fit the consumer preferences, but they may also obfuscate the ranking. Many of these search platforms also have so-called sponsored positions at the top of their ranking where firms compete and pay to be included. To evaluate the welfare consequences of the behaviour of search platforms, the effects of steering search should be modelled explicitly. This project aims to evaluate the different incentives of platforms to steer consumer search and firm behaviour, and how this shapes the competitiveness of consumer markets and consumer well-being. By delving into the details of the online search process and how it is affected by search platforms, the project not only aims to make important innovations to the academic search literature, but also aims to address important policy concerns related to online markets that are at the core of the EU Digital Market and Digital Service Acts.

Relationship Banking, Zombie Lending and Evergreening

Contact person(s): Anton van Bortel
Research area(s): Changing Markets and Institutions (CMI)
Funding body: Jubiläumsfonds der österreichischen Nationalbank (OeNB)
Funding: 175,000.00 €
2024-2026

When banks lend to unprofitable firms, this is referred to in international publications as 'zombie lending' or 'evergreening'. The aim is to understand how these zombie loans are possible in the context of optimal contracting, and what this means for firm banking relationships, the need for financial intermediation, and the aggregate demand for liquidity. If firms cannot be obliged to trade exclusively with one counterparty, they can try to obtain additional liquidity from third parties. Banks can grant endless loans to prevent their customers from entering into contracts with these third parties.

Misperceptions about the welfare state: Immigration and health behavior

Contact person(s): Christian Koch
Research area(s): Human Behavior and the Economy (HBE)
Funding body: WWTF (Vienna Science Technology Fund)
Funding: 341,306.00 €
2024-2026

The welfare state in modern societies is large and complex, which often makes it difficult for the population to grasp and understand. However, the acceptance and support of the welfare state also depends on citizens' perceptions. This project investigates the influenceability of citizens through a combination of register data and experimental information interventions embedded in a survey of a representative sample of the Austrian electorate. One focus of the study is on migration-specific aspects of the welfare state. The combination of register and survey data makes it possible to draw a detailed picture of who knows and thinks what about the welfare state in Austria, and which perceptions can be influenced and changed. We carry out both positive and negative information interventions. This allows us to test whether one-sided information campaigns can equally strengthen or weaken support for the welfare state, and which voter groups are most receptive to such one-sided information.

Parental Leave and Career Trajectories of Men and Women in Austria

Contact person(s): Lennart Ziegler
Research area(s): Human Behavior and the Economy (HBE)
Funding body: WWTF (Vienna Science Technology Fund)
Funding: 107,728.00 €
2024-2026

Career interruptions due to childbirth and subsequent parental leave are the quantitatively most important driver of gender differences in earnings. Even after mothers return to the labor market, they often work fewer hours and take up lower-paying jobs compared to their earlier employment. In this project, we propose to investigate leave choices of parents and examine how parental leave policies can shape leave-taking. Our analysis contributes to a better understanding of the gender gap in leave-taking, its consequences on work careers of mothers and fathers, and potential improvements in policy.

First, we descriptively analyze recent patterns in parental leave take-up of mothers and fathers in Austria. The unique combination of various administrative datasets at the newly established Austrian Micro Data Center (AMDC) allows us to provide a detailed characterization of parents who are most likely to take shorter and extended leave spells, by assessing the role of factors such as income, education, age, country of origin or region of residence. Moreover, we can quantify the consequences of leave-taking for future labor market outcomes for individuals themselves and their partners.

To learn about the importance of additional leave incentives for fathers, we examine the effects of a recent change in paternity leave policy. In March 2017, Austria introduced a one-month parental leave scheme tailored to fathers right

after childbirth, colloquially referred to as 'daddy month'. Stronger involvement of fathers right after childbirth might spur a more egalitarian split of childcare duties and facilitate an earlier return of women to the labor market. We evaluate the overall take-up of this new scheme and analyze its impact on employment and earnings of parents.

In the second part of the project, we assess how financial and career considerations affect parental leave choices of fathers. Financial incentives differ markedly between low- and high-earning parents, and we use income data provided by the AMDC to estimate how these incentives affect take-up rates. Linking fathers to workplaces further enables us to analyze if competition effects among coworkers deter fathers from taking leave.

The third part of our project investigates the role of social norms. The AMDC includes detailed data on a number of person characteristics that we employ to proxy attitudes towards family and gender issues. This allows us to examine to what extent the effectiveness of parental leave policies depends on the social norms and attitudes of families.

Reducing Food Waste due to Marketing Standards through Alternative Market Access

Contact person(s): Aikaterini Makri
Research area(s): Human Behavior and the Economy (HBE)
Funding body: European Commission
Funding: 250,496.00 €
2024-2026

It appears that a substantial amount of food waste may be due to marketing standards, yet there is very limited concrete evidence on how much, why and how to address it. There is a need to deepen our understanding and identify solutions to prevent and reduce food waste along with any trade-offs, by improving the business potential of suboptimal foods. ROSETTA sets out to deliver reliable evidence, produced through transdisciplinary research with the engagement of use case multi-actors, that a) estimates food waste generated by the use of marketing standards along the whole value chain, b) co-defines and validates sustainable solutions for the valorisation of that waste, and c) assesses trade-offs. The current framework of marketing standards of food commodities at international, EU, national and private level, will be analysed, and the reasons for their establishment will be assessed. An operational plan will be developed to deploy pilot experiments in five (5) use cases across EU countries, led by private marketing standards owners or networks/clusters in the value chain, representing four (4) main food commodities, namely fruit & vegetables, cereals, dairy and meat. A comparative analysis of data collected from both lab and field research, combined with LCSA study, will validate and optimise use-case selected solutions, which are expected to reduce food waste due to marketing standards by 60% – 80% through alternative market access for suboptimal foods, including processing and other strategies as well as changes in social practices. The validated and optimised solutions will provide insights for knowledge transfer and identify opportunities for social learning. Insights will be used to develop replication guidelines and policy recommendations, addressed to food businesses, marketing standards owners, policy makers and

regulators, to help revise or design marketing standards and support future policy development, in order to prevent and reduce food waste.

Unveiling emotional dimensions of politics to foster European democracy

Contact person(s): Jean-Robert Tyran
Research area(s): Human Behavior and the Economy (HBE)
Funding body: European Commission
Funding: 753,000.00 €
2024-2027

"The Emotional Politics of Democracies" (ENCODE) is an initiative under Horizon Europe which seeks to explore emotional dimensions in European democratic politics. It is set to run for three years, has a total budget of 3 million euro, and involves a consortium of ten organizations across eight European countries.

Emotions significantly influence political choices and participation, yet building democratically meaningful emotional narratives remains unexplored. This gap often leads to political depolarisation and a lack of trust in governance. Traditional policymaking fails to account for the emotional dimensions of public engagement, undermining effective communication. Addressing this issue is crucial for enhancing democratic processes. In this context, the EU-funded ENCODE project aims to decode emotional meanings and incorporate them into policy-making, promoting positive emotional engagement. Its 'affective pluralisation' framework guides research in eight European countries using diverse methods like sentiment analysis and biometric research. The findings will produce practical outputs, including best practice catalogues for tackling social media disinformation, handbook of emotional politics of the future narratives and policy recommendations

The University of Vienna team is Jörg Matthes (PI), Anand Murugesan, Konstantin Schmandt, and Jean-Robert Tyran (co-PI) will study the interplay of emotions, democratic values, and resilience (WP5). Murugesan and Tyran will focus on emotions and democratic values (WP T5.2) and on emotions and democratic resilience (T5.3). They combine experimental methodologies with large-scale surveys to enhance the understanding and measurement of democratic resilience across ten European countries. The expected outcomes include an experimentally validated survey and a geographical heatmap of democratic resilience aiming to gather new insights into how emotions affect political behavior.

VGSCO

Vienna Graduate School on Computational Optimization

Contact person(s): Immanuel Bomze, Radu Ioan Bot, Monika Henzinger, Arnold Neumaier
 Partner institutions: Faculty of Mathematics, Faculty of Computer Science, Vienna University of Economics and Business (WU), Vienna University of Technology (TU), Institute of Science and Technology Austria (IST)
 Research area: Data Science and Analytics (DSA)
 Funding body: FWF (Austrian Science Fund)
 Funding: 2,056,866.00 € (total funding of project)
 2020 - 2024 (2nd funding period)

The Vienna Graduate School on Computational Optimization (VGSCO) is a joint initiative between the Faculty of Business, Economics and Statistics, the Faculty of Mathematics and the Faculty of Computer Science (all 3 of University of Vienna), the Vienna University of Economics and Business (WU), the University of Technology Vienna (TU) and the Institute of Science and Technology Austria (IST) funded by the Austrian Science Funds (FWF). The Vienna Graduate School on Computational Optimization offers lecture series given by international experts in optimization related fields, organizes research seminars, retreats, soft skills courses, scientific workshops, and social events, provides travel grants, and supports research stays abroad. The short-time goal of the research and training programme of this Graduate School (DK+ programme) is to give the PhD candidates a comprehensive training in optimization with special emphasis on algorithmic and computational aspects as well as to prepare them for a scientific career by introducing them into the scientific networks of the participating scientists. The structure of the programme also allows to study the relations between different areas of optimization. In the long term we will foster collaboration between the members and their respective institutions in order to make Vienna a place of excellence in Computational Optimization. The first funding period ended in spring 2020; an extension of funding has been successfully applied for. The VGSCO is now run by the Faculty of Mathematics, but our faculty is still involved.

VGSF

Vienna Graduate School on Finance

Contact person(s): Thomas Gehrig, Nikolaus Hautsch, Christa Cuchiero, Gyöngyi Lóránth, Günter Strobl
 Partner institutions: Vienna University of Economics and Business (WU) & Institute for Advanced Studies (IHS)
 Research area: Changing Market and Institutions (CMI)
 Funding body: FWF (Austrian Science Fund)
 Funding: 691.329,95 €
 2024 - 2028 (6th funding period)

The VGSF is a joint doctoral school of the University of Vienna, WU and the Institute of Advanced Studies (IHS). The

VGSF offers a well-structured, top-notch PhD programme in Vienna since 2005. It has been a pioneer in structured doctoral education establishing the first doctoral school social sciences in Austria funded by the FWF. It builds on the core principles of inter-institutional cooperation, co-education and co-supervision and recruits its students internationally. The faculty members are part of a widely recognized international network and leading scholars are invited to teach courses or to present their research in seminars. The focus of research is on asset pricing, market microstructure, corporate finance and financial intermediation. The programme is entirely run in English. VGSF has an excellent track record with placements at University of Chicago, MIT, Georgia Tech, University of Wisconsin, University of Amsterdam, Aarhus University, BI Norwegian Business School, University of Oslo, University of Copenhagen, Humboldt University, University of Odense, Hong Kong University, University of Calgary, Swiss Finance Institute and many more.

OMDS

Oskar Morgenstern Doctoral School

Speaker: Thomas Gehrig
 Track Chairs: Christa Cuchiero, Thomas Gehrig, Jan Fabian Ehmke, Markus Georg Reitzig, Philipp Schmidt-Dengler
 Scientific Coordinator: Katherine Xueting Dou

The Oskar Morgenstern Doctoral School (OMDS) was opened at the Faculty of Business, Economics and Statistics in October 2023. The OMDS is dedicated to the renowned economist Oskar Morgenstern. Morgenstern was a professor at the faculty until 1938 and, in collaboration with the mathematician John von Neumann, founded the research field of game theory, which is located between economics and mathematics. The Oskar Morgenstern Doctoral School (OMDS) imparts problem consciousness and the analytical skills required by future academic leaders and top researchers to excel and create lasting impact in society. By combining a theory-based approach with modern empirical, experimental, statistical, and computational methods, future leaders of the industry and academia will be well equipped with cutting-edge methods to manage the complex societal challenges in economics and business. The OMDS unites at the moment the following 5 tracks: Business Analytics, Logistics, and Operations Research (BALOR), Economics (Vienna Graduate School of Economics - VGSE), Finance (Vienna Graduate School of Finance - VGSF), Management and Statistics and Data Analytics (Abraham Wald).

Dissemination of Research

This section lists activities in disseminating, discussing and debating research by our faculty members, starting with talks by speaker(s) in chronological order. We then state workshops that have been (co-)organised by members of our faculty, as well as presentations in one of our seminar series. We close this section by indicating awards and fellowships received in 2024.

Talks

Signatures methods in finance

Christa Cuchiero (Speaker)
Jan 2024

Hierarchical Parallel Processing Model

Maren Suffel (Speaker)
2 Jan 2024

Geographic and Socioeconomic Variation in Healthcare: Evidence from Migration

Nora Kungl (Speaker)
10 Jan 2024

Rutgers University: Bill Nobles Fellowship Program

Markus Reitzig (Keynote Speaker)
11 Jan 2024

Prediction of pareto fronts for multimodal travel itineraries

Jan Fabian Ehmke (Speaker), Thomas Horstmannshoff (Contributor), Marlin Ulmer (Contributor)
12 Jan 2024

ESG Ratings and Private Communication with Agencies

Klaus Haider (Speaker)
12 Jan 2024

Currency Wars and Monetary Regime Disintegration

Kirsten Wandschneider (Speaker)
15 Jan 2024

Polynomial interacting particle systems and non-linear SPDEs for capital distribution curves

Christa Cuchiero (Speaker)
15-19 Jan 2024

Why votes are (not) for Sale - Evidence from Southern India

Jean-Robert Tyran (Speaker)
17 Jan 2024

An extended latent factor framework for ill-posed linear regression

Gianluca Finocchio (Invited speaker), Tatyana Krivobokova (Contributor)
31 Jan 2024

Publishing Qualitative Research in Business and Management Journals

Emmanuella Plakoyiannaki (Speaker)
Feb 2024

From Lévy's stochastic area formula to universality of affine and polynomial processes

Christa Cuchiero (Speaker)
1 Feb 2024

Consumer Responses to Corporate Social (Ir)Responsibility

Ilona Szöcs (Speaker)
13 Feb 2024

Die Geldpolitik der EZB – Alte und neue Herausforderungen

Paul Pichler (Speaker)
20 Feb 2024

Global universal approximation of functional input maps on weighted spaces

Christa Cuchiero (Speaker)
25-29 Feb 2024

Iterative regularisation in ill-posed generalised linear models

Tatyana Krivobokova (Invited speaker)
Gianluca Finocchio (Contributor)
27 Feb 2024

Posterior Contraction for Deep Gaussian Process Priors

Gianluca Finocchio (Invited speaker)
Johannes Schmidt-Hieber (Contributor)
29 Feb 2024

2024 INFORMS Organization Science Winter Conference

Markus Reitzig (Panellist)
29 Feb 2024

Signatures methods in finance

Christa Cuchiero (Speaker)

6-8 Jun 2024

EATLP 2024 Congress

Christina Mittermayer (Participant)
6-8 Jun 2024

2024 ESMT Accounting Junior Conference

Ulrich Schäfer (Participant)
7 Jun 2024

Kurz- und langfristige Herausforderungen für den Staatshaushalt
Monika Merz (Participant)
7 Jun 2024

Herausgebersitzung des Journal of Business Economics
Oliver Fabel (Participant)
7 Jun 2024

Discovering the (Un)Sustainable
Thomas Gehrig (Participant)
13 Jun 2024

Konferenz des Österreichischen Bundeskanzleramts 2024: 30 Jahre Internationales Jahr der Familie
Katharina Auer-Zotlöterer (Participant)
14 Jun 2024

UB Microeconomics Workshop
Daniel Garcia (Participant)
20-21 Jun 2024

2024 University of Alberta Accounting Research Conference
Ulrich Schäfer (Participant)
21-22 Jun 2024

3rd Workshop on Residential Housing Markets
Ana Begona Ania Martinez (Participant)
26-27 Jun 2024

AMA CBSIG 2024 | Consumer Behavior Special Interest Group of the American Marketing Association
Katharina Auer-Zotlöterer (Participant)
1-3 Jul 2024

UseR! 2024 Conference
Georg Köstenberger (Participant)
8-11 Jul 2024

22nd Conference on Research on Economic Theory and Econometrics (CRETE)
Anastasia Leontiou (Chair)
10-14 Jul 2024

Future of Machine Learning Symposium
Tatyana Krivobokova (Participant)
19 Jul 2024

World Finance Conference
Thomas Gehrig (Scientific Advisor)
30 Jul - 2 Aug 2024

Accounting and Economics Society Annual Conference
Ulrich Schäfer (Participant)
9-10 Aug 2024

2024 Jr. Accounting Theory Conference
Ulrich Schäfer (Participant)
11 Aug 2024

2024 Annual Meeting of the American Accounting Association
Ulrich Schäfer (Participant)
12-14 Aug 2024

JACR Virtual Boutique Conference "Time in Consumption"
Katharina Auer-Zotlöterer (Participant)
19-20 Aug 2024

European Finance Association 2024
Thomas Gehrig (Scientific Advisor)
21-24 Aug 2024

EU's Global Gateway Initiative: African Perceptions
Lola Raich (Participant)
28-31 Aug 2024

51st EARIE Annual Conference
Anastasia Leontiou (Chair)
30 Aug - 1 Sep 2024

48. Jahrestagung der Deutschen Steuerjuristischen Gesellschaft e.V.
Daniela Hohenwarther-Mayr (Participant)
9-10 Sep 2024

48. Jahrestagung der Deutschen Steuerjuristischen Gesellschaft e.V.
Christina Mittermayer (Participant with Poster Presentation)
9-10 Sep 2024

15th PIERRE DU BOIS / 5th MACROHIST ANNUAL CONFERENCE 2024 Debt and Taxes. A History of Innovation
Kirsten Wandschneider (Participant)
26-27 Sep 2024

28th Young Statisticians Meeting
Daniel Wolfgang Peer (Participant), Georg Köstenberger (Participant), Ilaria Nadin (Participant)
27-29 Sep 2024

Women in Economic History, Netzwerktreffen
Kirsten Wandschneider (Participant)
10-11 Oct 2024

Strategic Management Society 44th Annual Conference
Markus Reitzig (Participant)
20 Oct 2024

tax@univie
Christina Mittermayer (Participant)
24 Okt 2024

ÖAW Lecture "Gender & Diversity"
Katharina Auer-Zotlöterer (Participant)
29 Oct 2024

First MethodsNET Conference
Bernhard Kittel (Panel Chair)
31 Oct - 1 Nov 2024

Wiener Konzernsteuertag 2024
Christina Mittermayer (Participant)
8 Nov 2024

Workshop of FOR 5381 (Forschergruppe "Mathematische Statistik im Informationszeitalter")
Johannes Moritz Jirak (Participant), Georg Köstenberger (Participant)
7-8 Nov 2024

5. Seminar-Tagung des Arbeitskreises für Gleichbehandlungs-
fragen der Universität Wien

Katharina Auer-Zotlöterer (Participant)

21-22 Nov 2024

IMT Workshop in Behavioral and Experimental Economics

Jean-Robert Tyran (Participant)

25 Nov 2024

Probability meets Biology: Berlin Edition

Karolina Klockmann (Participant)

27-29 Nov 2024

Oskar Morgenstern Doctoral School Winter Retreat 2024

Georg Köstenberger (Participant), Daniel Wolfgang Peer
(Participant), Tatyana Krivobokova (Participant), Johannes
Moritz Jirak (Participant)

6-7 Dez 2024

1st International Conference on Macroeconomic Implications
of Intra-Household Decision Making

Monika Merz (Participant)

11-12 Dez 2024

Seminar Series

Our seminar series are platforms to discuss recent and ongoing research. The exchange of ideas takes place in a more or less informal atmosphere. A brown-bag seminar is more informal and ideal to discuss new ideas and work in progress while senior researchers tend to present polished papers in a departmental seminar. Our seminar series are organised and funded by our departments and centres.

Vienna Joint Economic Seminar

On the benefits of robo-advice in financial markets

Jörg Oechssler (University Heidelberg)
7.3.2024

Donor Attention and Political Violence

Dominic Rohner (HEC Lausanne)
14.3.2024

Firm Expectations and News: Micro v Macro

Benjamin Born (Frankfurt School)
21.3.2024

The welfare consequences of urban traffic regulations

Isis Durrmeyer (Toulouse)
11.4.2024

Wage Bargaining and Labor Market Policy with Biased Expectations

Almut Balleer (RWI Essen)
18.4.2024

The Effect of Childhood Environment on Political Behavior: Evidence from Young U.S. Movers, 1992-2021

Enrico Cantoni (University Bologna)
25.4.2024

Simultaneous Search and Adverse Selection

Sarah Auster (University Bonn)
16.5.2024

The aggregate and distributional implications of credit shocks on housing and rental markets

Gonzalo Paz-Pardo (ECB)
23.5.2024

An Empirical Analysis of Merger Efficiencies

Alon Eizenberg (University Hebrew)
6.6.2024

Shaping Inequality and Intergenerational Persistence of Poverty: Free College or Better Schools

Alexander Ludwig (University of Frankfurt)
13.6.2024

Challenging the Pareto Principle in Risky Social Situations

Georg Weizsäcker (Humboldt Universität zu Berlin)
20.6.2024

Predicting Social Science Results

Severin Toussaert (University Oxford - St. John's College)
27.6.2024

Welfare versus Utility

Franz Dietrich (Paris School of Economics)
3.10.2024

Contagion Uncertainty and Macroprudential Policies

Carlos Ramirez (Federal Reserve Board)
17.10.2024

A Theory of Digital Ecosystems

Mats Köster (Central European University)
24.10.2024

Why are some regions so much more productive than others?

Chiara Lacava (University of Frankfurt)
31.10.2024

Outside Job Opportunities and the Gender Gap in Pay

Lena Hensvik (University of Uppsala)
7.11.2024

Trade Sanctions

Konstantin Egorov - University of Antwerp
14.11.2024

Computing Counterfactuals in Pricing Games with Application to Valuing the Primary Dealer Status

Jakub Kastl (Princeton University)
21.11.2024

Heterogeneity in MPC Beyond Liquidity Constraints: The Role of Permanent Earnings

Jeanne Commault (Sciences Po)
28.11.2024

Agreed and Disagreed Uncertainty

Francesco Zanetti (University of Oxford)
5.12.2024

Weighting Votes

Dimitrios Xefteris (University of Cyprus)
12.12.2024

ISOR Colloquium

The ISOR Colloquium is organised by Hannes Leeb, Tatyana Krivobokova, and Lukas Steinberger.

Multivariate geometric quantiles: robustness and extremes, PDE aspects, and Kolmogorov's distance

Dimitri Konen (CRISM - University of Warwick, UK)
08.1.2024

Stein kernels, functional inequalities and applications in statistics

Adrien Saumard (ENSAI, France)
15.1.2024

Essential concepts of Causal Inference: a remarkable history and an intriguing future

Donald B. Rubin (Harvard University, USA)
18.1.2024

Public presentation of PhD projects (FoeP)

Ilaria Nadin, Daniel de Vicente Jiang

29.1.2024

Denosing over network with application to partially observed epidemics

Olga Klopp (ESSEC Business School and CREST, France)

04.3.2024

Heat kernel PCA with applications to Laplacian Eigenmaps

Martin Wahl (Bielefeld University, Germany)

11.3.2024

Change-Point Detection for Dynamic Networks

Farida Enikeeva (University of Poitiers, France)

18.3.2024

Learning to reflect: On data-driven approaches to stochastic control

Lukas Trottner (Aarhus University, Denmark)

08.4.2024

Finite-sample performance of the maximum likelihood estimator in logistic regression

Jaouad Mourtada (ENSAE-CREST, France)

22.4.2024

Randomized selective inference

Daniel Garcia Rasines (Imperial College London, United Kingdom)

06.5.2024

Emission impossible: balancing environmental concerns and inflation

Sara Biagini (LUISS Guido Carli University, Italy)

27.5.2024

Log Concave Coupling for Sampling from Neural Net Posterior Distributions

Andrew R. Barron (Yale University, Connecticut, USA)

03.6.2024

A geometrical viewpoint on the benign overfitting property of the minimum ℓ_2 -norm interpolant estimator

Guillaume Lécué (ESSEC Business School, France)

17.6.2024

Public presentation of PhD projects (FoeP)

Daniel Peer

24.6.2024

Random set models for hierarchically structured battery cathodes

Matthias Neumann (Graz University of Technology, Austria)

21.10.2024

Linear regression with unmatched data: A deconvolution perspective

Fadoua Balabdaoui (ETH Zürich, Switzerland)

28.10.2024

Scan statistics for the detection of anomalies in large image data

Claudia Kirch (Otto von Guericke Universität, Magdeburg, Germany)

18.11.2024

Approximation bounds for conditional expectations and nonparametric regressions: theory and inference

Jean-Marie Dufour (McGill University, Montréal, Canada)

Citation-Based Ranking

The tables below provide a citation analysis for our tenured faculty and our professorial/senior research fellows (n = 58)¹ based on Scopus as of May 2025 taking the data into account up until and including the year 2024. This data-base is also used by the quality assurance unit of the university.

The table on the left shows the distribution of citations and the ranking of individuals by the total number of citations. The table on the right shows the distribution of citations and the ranking of individuals by Hirsch index h . The lower part of each table indicates the names of the faculty members who rank first according to these metrics. In case of faculty members achieving the same scores, we rank those in ascending order by age.

Distribution of citations	Research impact by total number of citations	
	Number of citations	Percentage of faculty members
	0-50	5%
	51-100	3%
	101-300	21%
	301-500	14%
	501-1000	16%
	> 1000	41%
Ranking of individuals	1 Diamantopoulos, A.	
	2 Hartl, R.	
	3 Dörner, K. F.	
	4 Eisend, M.	
	5 Gutjahr, W.	
	6 Pflug, G.	
	7 Kocher, M.	
	8 Plakoyiannaki, E.	
	9 Fuchs, C.	
	10 Bomze, I.	

Distribution of citations	Research impact by Hirsch index h	
	h-index	Percentage of faculty members
	0-2	2%
	3-5	9%
	6-10	25%
	11-15	21%
	16-20	17%
	> 20	26%
Ranking of individuals	1 Diamantopoulos, A.	
	2 Hartl, R.	
	3 Dörner, K. F.	
	4 Eisend, M.	
	5 Gutjahr, W.	
	6 Kocher, M.	
	7 Pflug, G.	
	8 Bomze, I.	
	9 Tyran, J.-R.	
	10 Plakoyiannaki, E.	

¹ The discussion here does not consider the law professors Hohenwarter-Mayr and Weilingner because publications in legal science follow different logics and patterns.

About the Faculty Journal List

The Faculty Journal List (FJL) is a dynamic, annually updated list that provides information on which journals are defined as Category 1 or Category 2 within the faculty. This definition was adopted in 2015 by the Research Commission and approved by the Faculty Board at the recommendation of the Scientific Advisory Board. The list is newly compiled at the beginning of every year and thus serves to retrospectively categorize the publications of the previous year.

For this purpose, the current individual lists of the different subject areas – citation indices **SSCI** (Social Sciences Citation Index) & **SCIE** (Science Citation Index Expanded) are taken from the Web of Science (Web of Science Core Collection – Web of Science Group) and ranked according to the respective Article Influence Scores of the journals.

clarivate.com/webofsciencegroup/solutions/web-of-science

The top 10% of the journals in these individual lists are listed as Category 1 journals in the FJL. The remaining journals of the top 25% of the individual lists are assigned to Category 2 (see Figure 1).

Figure 1: Categorization of Journals (SSCI & SCIE)

Additionally, four so-called complementary lists are included in the ranking. These include:

- **Business:** The VHB Rating 2024 comprises 18 specialized area ratings that evaluate the scientific quality of publication media in German-language business administration. This ranking is based on the judgment of professors in Business in the German speaking area. There are two top levels in this ranking: The "A+" journals are assigned to Category 1, the "A" journals to Category 2 of the FJL.

<https://www.vhb-online.org/services/vhb-rating-2024/teilratings>

- **Economics:** Handelsblatt-VWL-Ranking 2013. Contains all journals in EconLit, journal list of the American Economic Association, plus a few additional journals in statistics as well as Nature and Science. Weights are based on Combes and Linnemer (2010). We use the top two levels in their classification. The journals with "weight 1.0" are assigned to Category 1, the journals with "weight 0.6" to Category 2.

[forschungsmonitoring.org](https://www.forschungsmonitoring.org)

- **Statistics:** A list compiled by the Australian Mathematical Society (AMS) is used here. The "A*" journals contained therein are listed as category 1, the "A" journals as Category 2 of the FJL.

austms.org.au/Rankings/0104_AustMS_final_ranked.html

- **Finance:** The list compiled by the Amsterdam Business School (ABS) is used here. The "A*" journals included are listed as Category 1, the "A" journals as Category 2 of the FJL.

<https://abs.uva.nl/research/research-policy-ethics--integrity/research-policy-ethics--integrity.html#Research-publication-criteria>

The journals in our Faculty Journal List are listed alphabetically within the respective category:

► **Category 1 Journals | 53**

► **Category 2 Journals | 66**
